

Fetal Heart Rate Auscultation, 2nd Edition

The 2009 practice monograph, Fetal Heart Rate Auscultation, 2nd edition, has been withdrawn. The document is being revised and will be published in the December 2018 issue of Nursing for Woman's Health. AWHONN members will have access to the article as a member benefit. AWHONN nonmembers will be able to purchase the article from the AWHONN store or NWH.

The following AWHONN resources have information about intermittent auscultation:

- The Fetal Heart Monitoring Principles and Practice (5th ed.) book (may be purchased as a hard copy or an e-book).
- The AWHONN Intermediate Fetal Heart Monitoring (two day) course has lecture and a skill station on intermittent auscultation.
- The AWHONN position statement, Fetal Heart Monitoring, outlines the frequency of assessment when monitoring using IA. AWHONN position statements are available from the AWHONN Website in the Professional Resources section.
