Scholarships are available for college/university students interested in attending an AZWater Technical Luncheon. Please contact us!

Presented by: Daniel R. Quintanar, Tucson Water

Abstract: Emergency preparedness planning is a huge effort for any water utility to undertake. The America’s Water Infrastructure Act 2018 (AWIA) provides a framework using risk and resiliency assessments to identify the strengths and weaknesses of your water system and where you should focus mitigation efforts. AWIA will shape the effectiveness of your Emergency Response Plan.

Sponsors:

Dibble: Dibble Engineering provides a full range of multidisciplinary services to clients across the Southwestern United States. Our Water + Wastewater Practice delivers innovative and creative solutions for water, wastewater and reclaimed water infrastructure needs. We provide a full complement of technical services, including infrastructure planning; pipeline design for gravity and pressure transmission, distribution, and collection systems; storage and pumping system design for water, sewer and reclaimed water systems; and technical support for system startup, commissioning and optimization.

Ninyo & Moore: Established in 1986, Ninyo & Moore has grown to 18 offices in the western United States specializing in Geotechnical Engineering, Environmental Engineering, and Materials Testing and Inspection Services. Engineering News Record recognized the firm as one of the Top 500 Design Firms in the United States. Services provided encompass all phases of a project, from the planning stage through design and construction. Ninyo & Moore has fully equipped and certified in-house testing laboratories that offer full-service field and laboratory services for geotechnical design, and soil and materials testing projects.
