As an advocate for regulatory conditions that foster value for the furniture industry, one thing remains the same: delivery. We’re evolving as well. As the voice of the commercial workspace evolves, presenting new and complex challenges to safety, ergonomics, and sustainability. But as the role of design is expanding as disruption of the traditionalworkspace evolves, making products, but to the employees using those products to get work done.

Our industry’s service to our customers – providing products that support healthy, comfortable, and productive spaces – is grounded on an infrastructure of engineering and materials standards. And standards matter, not only to the companies that make products, but to the employees using those products to get work done.

The role of design is expanding as disruption of the traditional workspace evolves, presenting new and complex challenges to safety, ergonomics, and sustainability. But as the role of design is expanding as disruption of the traditional workspace evolves, making products, but to the employees using those products to get work done.

As an advocate for regulatory conditions that foster value for the furniture industry, one thing remains the same: delivery. We’re evolving as well. As the voice of the commercial workspace evolves, presenting new and complex challenges to safety, ergonomics, and sustainability. But as the role of design is expanding as disruption of the traditional workspace evolves, making products, but to the employees using those products to get work done.

We are continually exploring new ideas and additional advances will be made in the coming year. Here are some of the recent accomplishments we’re proud to share from 2017.

WHO WE ARE

BIFMA is the not-for-profit trade association for business and institutional furniture manufacturers. Our standards have a relevance that goes beyond engineer-

ing. Since 1973, we’ve made it our mission to serve our members operating responsible manufacturing facilities and making responsible products with standards that matter.

Our industry’s service to our customers – providing products that support healthy, comfortable, and productive spaces – is grounded on an infrastructure of engineering and materials standards. And standards matter, not only to the companies that make products, but to the employees using those products to get work done.

The role of design is expanding as disruption of the traditional workspace evolves, presenting new and complex challenges to safety, ergonomics, and sustainability.
