

**Neil Goldenberg, MD, PhD**  
**Associate Professor of Pediatrics**  
**Division of Hematology**  
**John Hopkins University School of Medicine**  
**Director of Research**  
**John Hopkins All Children's Hospital**

Neil Goldenberg, MD, PhD is Director of Research at Johns Hopkins All Children's Hospital and Associate Professor of Pediatrics in the Division of Hematology, Department of Pediatrics, Johns Hopkins University School of Medicine. He also directs the Thrombosis Program in the Johns Hopkins All Children's Cancer and Blood Disorders Institute, as well as the Stroke Program in the Johns Hopkins All Children's Institute for Brain Protection Sciences. Dr. Goldenberg is a pediatric hematologist (blood disorder specialist) who is a

world-recognized leader in clinical care and research in both thrombosis (blood clots in the vessels) and stroke in children and young adults. In 2012 received the international Eberhard F. Mammen Excellence in Thrombosis and Hemostasis Award. He has led or participated as an expert panelist on numerous recent national and international treatment guidelines and scientific committees in pediatric and adult thrombosis and stroke.

**RESEARCH INTERESTS:** Dr. Goldenberg holds a Ph.D. in Clinical Science and is the global principal investigator for the National Institutes of Health, National Heart Lung and Blood Institute-sponsored Kids-DOTT trial, the largest randomized controlled trial to date in the field of pediatric venous thrombosis (blood clots in the veins). He chairs or serves on numerous oversight committees of pharmaceutical industry- and academically-led clinical research studies of new anti-clotting medications. Dr. Goldenberg's main research interests include the design and conduct of innovative clinical trials, predictive modeling of patient outcomes, and prognostic biomarker discovery in pediatric thrombosis and stroke. He also mentors many trainees and junior faculty members in applying these research methods in a broad variety of pediatric diseases.
