Dr James Scuffham  
Royal Surrey County Hospital  

Talk Title: Practical considerations for preparing Nuclear Medicine departments for Lu-177 PSMA therapies  

James is the Head of Nuclear Medicine Physics at the Royal Surrey County Hospital, where he leads a team of Physicists supporting diagnostic and therapeutic nuclear medicine services across the South East of England. James has led the implementation of a number of new diagnostic imaging and molecular radiotherapy procedures at the Royal Surrey. James has a keen interest in research and development, particularly in quantitative SPECT imaging, dosimetry and novel detector technology. He holds a joint appointment with the National Physical Laboratory and is also an Associate Tutor at the University of Surrey where he lectures on the Medical Physics MSc course. James was recently appointed to the Scientific and Education Committee of the BNMS.
