

James Storozuk
Vice President, Asset Management & Central Operations, Infrastructure Ontario

One of Canada's largest public real estate management organizations. His responsibilities include strategic asset management and central operations (building engineering and building automation management). Much of his career was spent as a Chief Information Officer in a variety of industries, including e-commerce, manufacturing, health care, education and the public sector. His extensive IT background lends well to building automation given most, if not, all building improvements are based on technology with the usual challenges; the uniqueness of each building, standardization & systems integration and utilizing the right technology at the right time as the market evolves.
