Twins Cities Chapter September Tour Recap

Almost half of the month’s precipitation for Minneapolis fell on Sept. 20th, but that didn’t deter all the registered attendees for the Twin Cities CCAI Chapter tour of Target Field. The focus of the tour was sustainability of the compact, transit-oriented ballpark that earned LEED Gold Certification. We were lucky to have as our tour guide Kristin Anderson, a distinguished professor at Augsburg College with a passion for ballpark design and knowledge of the innovative elements of Target Field. These include the rainwater recycling from the playing field, cantilevered deck designs, lighting, transit hub and historical artifacts spread out within the facility for fans. Following the tour - and a break in the rain – we walked to nearby beverages and dinner.
