

## Conference Partnership and Sponsorship Opportunities

The Collaborative Family Healthcare Association (CFHA) is a non-profit 501(c)3 whose mission is to promote comprehensive and cost-effective models of healthcare delivery that integrate mind and body, individual and family, patients, providers and communities. CFHA is a non-guild, multidisciplinary collaborative organization with professionally diverse and nationally influential constituents, achieving its mission through education, training, research, and advocacy.

Since 1993, CFHA has sponsored the pre-eminent conference on integrating healthcare services in the United States. Attracting over 500 expected attendees, the goal of the 2018 Conference is to promote the continued development, implementation and evaluation of integrated health care while considering its evolution and future. With over 70 breakout sessions, three plenaries, and a variety of networking and mentoring opportunities, attendees will learn about the full continuum of integration.

CFHA is seeking innovative healthcare leaders to partner as we advance integration and collaborative healthcare by providing a grant of support for this endeavor. Financial partners will be strategically positioned to enhance their organizational presence while helping to facilitate the dissemination of a nationally derived body of academic and policy work. Please see attached partnership opportunities.

Or contact us on the CFHA  
website [here](#).

The collaborative family healthcare model envisions seamless collaboration between psychosocial, biomedical, nursing and other healthcare providers, and views patient, family, community, and provider systems as equal participants in the healthcare process.

This approach is a radical departure from conventional “diagnose and refer” models and is distinctly different from the usual managed care approaches. It recognizes that clinical events always occur at biological, psychological and social levels, and that patient, family, and community levels represent integrated elements of a single ecosystem.

By adding the essential ingredients of psychological and family care at the front end, and continuously throughout the healthcare process, and by coordinating and integrating the expertise of these and other healthcare professions, wasteful and repeated diagnostic procedures are minimized, as are costly sub-specialty referrals.

It is a profoundly ethical approach that conserves resources for all participants: patients and their families, clinical providers, administrative and financial entities.
