Step 1: Needs Assessment

What are your training needs?

Do your providers have prior competency based training?

Step 2: Measures of Success

How will you measure provider fidelity (PPAQ?)

What clinic level outcomes are important to you – Same Day access? Penetration rate?

What will be your goal for Competency Pass Rate?

What types of tracking systems for program evaluation and data management will you need to develop?

Step 3: Stakeholders

How will you engage PC/MH Leadership? What do you need to do to brief and involve hospital/facility leadership to gain their support?

How will you engage Frontline staff? Will support staff need to be involved in implementing any process changes?

Step 4: Curriculum Development

Which models are you implementing and do your staff need training in? Collaborative Care Management? Primary Care Behavioral Health?

Which curriculum will you consider for adaptation to your own setting? DoD? VA? Free APA Curriculum?

Considering your staff's prior knowledge & expertise, what type of training will you build? Virtual training? In person training? Combination? Regional train-the-trainer?

How will you create a mechanism for curriculum storage and dissemination?

Step 5: Pilot

Who will be your initial "class"?

How will you train trainers?

How will you support and monitor the completion of your baseline/pre-assessment surveys and administrative data collection? Prework? Ratings? 3 and 6 month outcome data and beyond?

Step 6: Implement

How many sites do you need to scale to?

How will you continue to train trainers?

What methods will you use to re-evaluate and revise curriculum?

How will you build communities of practice for implementation?
