

Cross Cutting Issues In Occupational and Non-Occupational Injury Prevention

John R. Myers, MS
NIOSH Division of Safety Research
Morgantown, WV

The findings and conclusions in this presentation are those of the author and do not necessarily represent the views of the National Institute for Occupational Safety and Health.

Background

- NIOSH and NCIPC have both developed national injury control priorities
- Came up with these priorities based on public health significance of the injury outcome and the populations at risk
- Processes were largely independent of each other
- Still are several areas of overlap between the two sets of priorities.

Areas of Current Overlap

- Causes of injury
 - Motor Vehicles
 - Violence
 - Falls
- Populations at Risk
 - Youth
 - Older adults
- Programs
 - Surveillance

Areas of Overlap: Injury Cause and Populations at Risk

	Cause		
Population at Risk	Motor Vehicles	Violence	Falls
Youth	X	X	
Older Adults	X		
General population		X	

Areas of Overlap: Surveillance

- Increased use of ICD external cause code sets in medical records
 - NCIPC: State surveillance systems
 - Collection and data quality focus
 - NIOSH: Electronic Health Records
- NEISS injury surveillance support
 - NCIPC: All injury
 - NIOSH: Occupational injury

NCIPC/NIOSH Directors Letter

- Sent to state health departments
- Encourages collaborations between NCIPC and NIOSH funded programs within the same health department
- Initial starting point to help states
