High flow oxygen therapy via nasal prongs (HFO₂NP) and swallowing: An evidence review and a snapshot of clinical practice data of Australian Speech Pathologists

4. NSW Critical Care & Tracheostomy EBP Group, Sydney, New South Wales, Australia

Conclusions (including clinical relevance): Elements of the E³BP framework provided a more holistic understanding of SP practice. The majority of clinicians reported assessing patients on an individual basis versus assessing to a set oxygen/flow rate. This infers HFO₂NP is not seen as an independent barrier but a possible factor to assessment; with clinicians considering many possible causative factors of dysphagia.
