arianouri9@gmail.com

Spine research group name *
Geneva Neurosurgery Spine Research

Coworkers *
Enrico Tessitore, Granit Molliqaj, Karl Schaller

Main research topic *
Degenerative Cervical Myelopathy

Additional research topics
Spine Trauma, Surgical Outcomes

Area of research
Clinical
Short summary of research group activities *

We are leading or participating in multiple research projects surrounding various spine-related topics. We have 2 active and ongoing prospective studies related to the diagnosis, management and surgical outcome of patients with Degenerative Cervical Myelopathy (DCM), including SCREEN-DCM. We are also part of the STIMO-2 (Study on Feasibility of Stimulation on the Lumbar Part of the Spinal Cord to Improve Mobility Recovery in Patients With Subacute Spinal Cord Injury) and EUROSPIN trial (observational study of pedicle screw revision surgery after robot-guided, navigated and freehand thoracolumbar spinal fusion). There are also ongoing efforts to increase our research activities via our involvement in RECODE-DCM as well as others.

We have recently edited an open access special issue on DCM. Here is the link --
