

Aesthetic challenges in implant dentistry. Surgical and prosthetic approach in the anterior area

Dr Mauro Fradeani and Dr Stefano Gori

Pesaro, Italy

Implant-supported single tooth replacement in the aesthetic zone always represents a challenge. Sometimes, implants can be inserted immediately after tooth extraction. In other cases, clinician must manage edentulous sites involving varying degrees of resorption of the alveolar process.

Lectures will focus on the importance of observing different specific – often multidisciplinary – protocols in order to obtain excellent aesthetic results.

What you will learn

- how to choose the proper timing for implant placement after the extraction of an anterior tooth
- the pros and cons related to the immediate and delayed implant placement
- the most appropriate clinical protocol for different clinical situations characterised by anterior single-tooth or multiple-teeth replacement

Timetable and course overview

Day 1: Friday 30 November, 2018

09:00–11:10	Welcome and introduction lecture: <i>Dr Fradeani.</i> The aesthetic parameters: facial, dento-labial, phonetic, dental and gingival analysis. Functional analysis: overjet/overbite evaluation
11:10–11:30	<i>Coffee break</i>
11:30–13:30	Lecture: <i>Dr Gori.</i> Timing of implant placement in relation to tooth extraction. What is the best approach in the aesthetic area?
13:30–14:30	<i>Lunch break</i>
14:30–16:30	Lecture: <i>Dr Gori.</i> Immediate implant-supported tooth replacement in the aesthetic area: step-by-step surgical and prosthetic protocol
16:30–17:00	<i>Coffee break</i>
17:00–18:00	Lecture: <i>Dr Fradeani.</i> Multidisciplinary implant protocols for complex aesthetically compromised cases

Day 2: Saturday 1 December, 2018

09:00–11:00	Hands-on: <i>Dr Gori.</i> Implant site preparation and correct implant insertion in an anterior alveolar socket using an artificial model
11:00–11:30	<i>Coffee break</i>
11:30–12:45	Hands-on: <i>Dr Gori.</i> Pouch preparation, harvesting and placement of a connective tissue graft in an anterior alveolar socket using a pig model
12:45–13:00	Distribution of course certificates and group pictures
