In addition to the papers in this database, more than 50 clinical trials reporting investigations of Energy Psychology have been published in foreign language journals. They report encouraging outcomes with a wide range of issues, such as anxiety disorders, aggression, drug addiction, dementia, depression, post-traumatic symptoms, post-operative pain, and controlling insulin levels in diabetes. These studies were not included in this database because only the abstracts had been translated, and so they could not be reviewed for methodological rigor. Also not included are English-language publications for which ACEP was unable to verify the legitimacy of the journal. In this era of predatory journals, we are not inflating our count of legitimate energy psychology studies.
