ADA CERP® Continuing Education Recognition Program

The American Academy of Esthetic Dentistry is an ADA CERP Recognized Provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry.

AAED designates this activity for 14 continuing education credits.
2016 ANNUAL MEETING GOALS

• Provide improved understanding of evidence-based methods for achieving excellence in esthetic and restorative dentistry
• Provide interdisciplinary education and advanced knowledge in esthetic, endodontic, prosthodontic, periodontic, orthodontic, surgical and dental technology aspects of patient care
• Strengthen in-depth knowledge in materials selection and ethical considerations in esthetic and restorative dentistry
• Create a welcoming environment for networking and professional interaction among participants that builds on the mission of AAED and the spirit and legacy of its founders

AMERICAN ACADEMY OF ESTHETIC DENTISTRY MISSION

To promote the integration of dental esthetics into the total spectrum of oral health care and provide a leadership role for the profession by defining the highest interdisciplinary clinical, scientific, artistic and ethical standards through research, publications and educational presentations.

POINT COUNTERPOINT

#AAED2016
PRESIDENT’S WELCOME

Welcome to sunny California for the American Academy of Esthetic Dentistry’s 41ST ANNUAL MEETING. AAED is the world’s oldest, most prestigious esthetic dental society. As is tradition, we are gathered here with colleagues and guests to share ideas, techniques and experiences with one another. This year, we will also take time to acknowledge and celebrate our past presidents, who have led the Academy with integrity, strength and foresight throughout our history.

This year’s theme, “POINT COUNTERPOINT: THE CONTROVERSIES & INNOVATIONS IN ESTHETIC DENTISTRY,” provides us an innovative format for the educational program. Each of our five session topics will begin with a 20-minute Point, a 20-minute Counterpoint and a 10-minute Summation, followed by lecture and discussion. I’m eager to hear how our outstanding slate of world-renowned speakers will present their information in this engaging format.

I’m thrilled that you’ve joined me for three days of exceptional education and great conversation along the beaches of DANA POINT, CALIFORNIA. Our conference location, speaker lineup, program format and social activities promise nothing short of another outstanding annual meeting. Enjoy!

DENNIS TARNOW, DDS
President
The theme of this year’s meeting, “Point Counterpoint: The Controversies & Innovations in Esthetic Dentistry,” will be explored through five key sessions, each session consisting of a Point, Counterpoint and Summation, followed by lectures and panel discussions. These sessions will be led by more than 25 world-renowned experts in the field.

Our President’s Opening Reception will be highlighted by a sunset toast that you won’t want to miss. Join your colleagues to honor the 28 past presidents who will be in attendance, and kick off your time in Dana Point with great cocktails and lively conversation.

To give our attendees time to thoroughly enjoy Southern California, we have prearranged optional tours and social activities for you and your guests. Thursday afternoon and evening are open for you to do as you please, with the option of attending the Pageant of the Masters and Festival of the Arts in Laguna Beach, for which we have secured a limited block of tickets.

The Closing Reception and Gala on Friday evening will offer the perfect setting to bid farewell to another phenomenal meeting. Dress in all-white attire and enjoy cocktails, dinner and dancing near the beach.

---

The AAED expresses sincere gratitude to the entire Annual Meeting Committee for their hard work and dedication to this event over the past year.

NEITHER IS THE ANATOMY OF YOUR IMPLANT PATIENTS

Your world is already full of clinical challenges so why work harder because of conventional thinking? Instead of augmenting sloped ridges to accommodate flat-top implants, it’s time to discover a simpler solution by using an implant that follows the bone.

Because sloped-ridge situations call for anatomically designed sloped implants.

2015 CHARLES L. PINCUS AWARD

PETER E. DAWSON, DDS

Join us at the close of the day’s sessions on Wednesday, August 3, for the official presentation of this prestigious award to 2015 recipient Dr. Peter E. Dawson. In addition to Dr. Dawson’s accomplishments in the field, he is also being recognized for his commitment and exemplary services to AAED. Please join us in congratulating Dr. Dawson for this notable honor.

AAED GRANT FOR RESEARCH IN ESTHETIC DENTISTRY

2015 RECIPIENT – NATHANIEL LAWSON, DMD, PHD

We congratulate Dr. Nathaniel Lawson as the recipient of this grant for his research entitled, “Fracture Strength of Zirconia Crowns Following Artificial Aging.”

RESEARCH SUMMARY

Durable bonding to zirconia can be achieved with alumina particle abrasion of its surface. Alumina particle abrasion does not adversely affect the strength of traditional tetragonal zirconia, however, it significantly weakens new translucent zirconia. The purpose of this study is to compare the crown fracture strength of traditional and translucent zirconia crowns with and without particle abrasion. Thirty-two stylized zirconia crowns will be fabricated from traditional (n=16) and translucent (n=16) zirconia and half will be alumina particle abraded. After load and thermal aging, the crowns will be fractured in compression to determine their ultimate fracture load.

The annual AAED Grant for Research in Esthetic Dentistry is funded by AAED via the Charles L. Pincus Fund and Oral Health America. Dr. Lawson is Assistant Professor of the Division of Biomaterials at the UAB School of Dentistry in Alabama.

BioHorizons is known for using science and innovation to create unique implants with proven surgical and esthetic results. Laser-Lok microchannels exemplify our dedication to evidence-based research and development.

The effectiveness of Laser-Lok has been proven with over 25 years of in vitro, animal, and human studies at leading universities. This patented precision laser surface treatment is unique within the industry as the only surface treatment shown to inhibit epithelial downgrowth, attract a true, physical connective tissue attachment to a predetermined zone on the implant and preserve the coronal level of bone, long term.

Laser-Lok is available on Tapered Internal, Tapered Plus, Tapered Tissue Level and Tapered 3.0 implants.
