The I-95/Viera Boulevard Diverging Diamond Interchange opened to traffic in 2019, making it the first DDI constructed in FDOT District 5, the first DDI constructed over the Interstate System in Florida, and the first to utilize existing bridges rather than new construction.
The DDI at I-95 and Viera is a game changer for the surrounding communities, providing an additional access point and alleviating congestion at the other two I-95 interchanges in Brevard County.
The design team worked to incorporate sustainable elements including landscaping and incorporating environmental elements to limit runoff pollutions. This approach enhances the environmental integrity of the area and improves quality of life for those who live in and travel through the community.
The I-95/Viera Boulevard DDI incorporates bike lanes and a multiuse path as well as pedestrian-friendly, multi-modal amenities including continuous sidewalks, pedestrian actuated traffic signals, crosswalks, median island refuges as well as marked and signed bike lanes.
