

**ONLY
\$199**

Thursday, December 10, 2020

Seminar Agenda

Morning

- * Welcome and Introductions
- * Comprehensive Diabetes Care
- * Treating Type 2 Diabetes
- * Insulin Therapy in Type 1 and Type 2 Diabetes

Afternoon

- * Nutrition and Lifestyle Counseling for Patients
- * Hands-On Skills Practice
- * Next Steps and Resources

This virtual program will be conducted on Thursday, December 10, 2020 utilizing Zoom video conferencing. To complete this program, you must complete the self-study component, attend the virtual live session and participate in the hands-on skills practice. The \$199 program fee is non-refundable.

SESSION DATE/TIME

Thursday, December 10th 8:00 AM – 5:00 PM EST

This program was developed by the American Pharmacists Association and is delivered in partnership with the Florida Pharmacy Association. This offering is supported by an educational grant from Merck.

APhA's *The Pharmacist & Patient-Centered Diabetes Care* certificate training program (5th Edition) is an intensive educational experience designed to equip pharmacists with the knowledge, skills, and confidence needed to provide effective, evidence-based diabetes care. Participants will gain experience evaluating and adjusting drug therapy regimens for patients with type 1 and type 2 diabetes, counseling patients about lifestyle interventions, analyzing and interpreting self-monitoring of blood glucose results, and assessing the overall health status of patients to identify needed monitoring and interventions. This program has two components: online interactive self-study with assessment and the live seminar conducted virtually via a Zoom meeting.

In addition to enrollment in the diabetes certificate training program, your \$199 registration fee will also provide you with an automatic free enrollment in **APhA's Test Your Knowledge: Diabetes Care**. This **free 2-hour online CPE program** will be loaded onto your profile six months later and will provide you with a review of the information you experience in the certificate training program. It will also provide any up-to-date diabetes information six months following the certificate training program. You are not obligated to participate in this CPE program, but it is provided to you free as part of your enrollment in the diabetes certificate program. It is supported by a grant from Merck. Visit pharmacist.com/ctp for a list of learning objectives, faculty credentials and ACPE information.

During the virtual seminar we will be demonstrating blood pressure testing, discussing self-injection techniques, reviewing diabetic foot examinations, and showing proper blood glucose testing procedures. Some supplies (sodium chloride vial, insulin syringe, monofilament, alcohol swabs, Band-Aids) will be shipped to you prior to the live seminar so that you may participate by virtually demonstrating your competency in these skills. It is recommended that you secure a blood pressure cuff and stethoscope prior to the session. If you can also secure a glucose meter, strips, and lancet you will be able to demonstrate your skills from your location as the faculty discuss proper techniques. Again, APhA cannot mail participants cuffs, stethoscopes, or meters so if you are able to secure those items on your own please do so. Also note that APhA will not be mailing sharps containers so participants will be responsible for securing access to appropriate sharps disposal.

Prior to registering for this program, please make sure that all the information on your pharmacist.com profile is current including your mailing address and preferred email address. Supplies will be mailed to the address on file and APhA will not be able to resend materials if they were mailed to an old address. The Zoom meeting invite will be sent to your preferred email address on file for your account. The invite will be sent within a few days prior to the meeting.

To register for this program please read all the information above then click the link below to enroll.
