**These four core courses are prerequisites for the on-site face to face course. You must have successfully completed these courses prior to registering for the on-site course. No exceptions.*

Advanced Competency in Home Health Live Training Course

This 2 day, 15 hour course is designed to complement and build on the core modules of the Advanced Competency in Home Health program. During the two day program, participants will revisit and practice skills required for quality cardiopulmonary, orthopedic and balance assessments that will be integrated into clinical vignettes. Participants will use these skills to support a thorough but efficient OASIS start of care or physical therapy evaluation in the home setting. Throughout the 2 day program, ethical and regulatory issues, as well as documentation will be incorporated into clinical case studies. Participants should be able to take the skills covered back to their home health settings and incorporate them immediately into patient care.

This course will be available at various times and locations annually. See the [Home Health Section website](#) for scheduling. This course is also available as a 2-day preconference course each February as a part of APTA's [Combined Sections Meeting](#).

Elective Courses

In addition to the required courses listed above, successful ACHH certificate candidates must also complete **a minimum of 4 hours** of online home health electives. You may choose from a number of elective topics and the Home Health Section will continue to expand the number of elective courses available over time.
