# IADMS Poster Presentation Layouts

1. Portrait Layout

This layout works well for many IADMS presentations but, of course, many other effective designs are possible. Choose one that effectively displays the type of information you are presenting. If you believe readers will read your poster, start to finish, you may want to organize the sections in the order you would like them to be read. If you expect most readers to look at only a few sections, you may want to put those sections in prominent locations and arrange the rest of the information around those focal points.

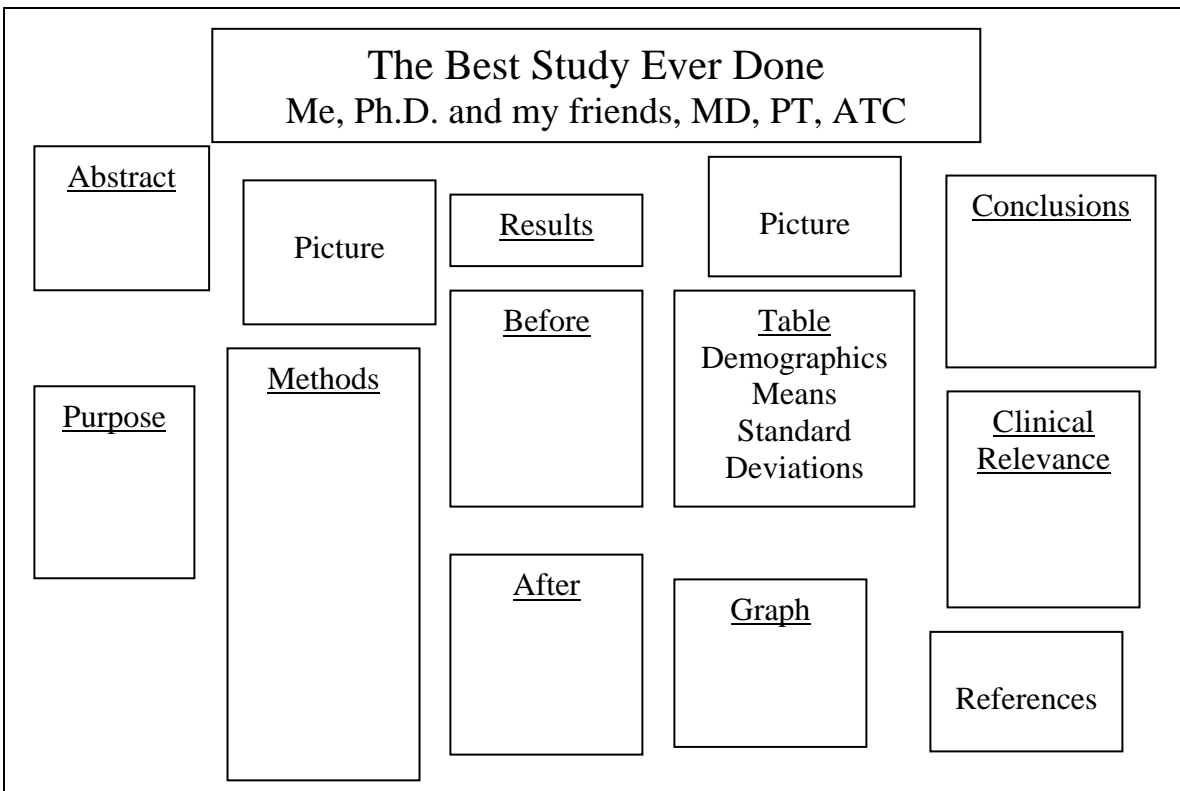

Prepared by Jeffrey Russell & Virginia Wilmerding with help from the IADMS Research Committee.

2. Landscape Layout

This layout works well for many IADMS presentations but, of course, many other effective designs are possible. Choose one that effectively displays the type of information you are presenting. If you believe readers will read your poster, start to finish, you may want to organize the sections in the order you would like them to be read. If you expect most readers to look at only a few sections, you may want to put those sections in prominent locations and arrange the rest of the information around those focal points.
