

IHEA Introduces Member Voucher Program

The Industrial Heating Equipment Association (IHEA) is pleased to announce a great new program in 2018. It is a part of IHEA member dues and is designed to assist members in providing educational opportunities to their own employees and customers. This has come about as each year more members request ways to pre-pay for meetings and pay for customers to attend IHEA's educational events.

Our new "member voucher program" will provide two vouchers to each manufacturing member company and four vouchers to our corporate end-user companies as part of their membership benefits. Vouchers can be used by employees or customers to register for a variety of IHEA events throughout 2018.

One voucher will be required to register for IHEA seminars, online courses and the Fall Business Conference. Two vouchers will be required to register for the IHEA Annual Meeting. Vouchers can even be used to register for the 2018 IHEA Safety Standards & Codes seminar, where we will review the new NFPA 86 revisions.

IHEA strives to provide the knowledge base to the thermal-processing industry, and this program will assist in that effort. IHEA members will be able to extend the vouchers to customers, enabling them to obtain training and education

while also gaining exposure to IHEA's network and valuable resources. The program will also attract more participation from those using thermal-processing technologies.

As a result of the voucher program, IHEA welcomes the newest corporate end-user member, Caterpillar, and returning member John Deere. Since end-user members receive four vouchers for employees to use for IHEA training or events, this effectively pays for the annual dues when redeemed. Along with the vouchers, end-user members receive additional IHEA member benefits that extend to all employees. They can take advantage of discounts on all online resources and events, participate on committees, receive the quarterly newsletter and get further involved with manufacturing members.

For more information about IHEA's voucher program and membership, visit www.ihea.org and click the "About Us" tab on the menu bar.

Established in 1929 to meet the need for effective group action in promoting the interests of industrial furnace manufacturers, IHEA has expanded and currently includes designers and manufacturers of all types of industrial heat-processing equipment used for the melting, refining and processing of ferrous and nonferrous metals and certain nonmetallic materials and for the heat treatment of products made from them.
