

Understanding Pressure, Temperature, And Flow Instrumentation

Presenter(s):

Mike Phelps, Kodiak Controls, Inc.

Abstract: This presentation basically gives a detailed overview of various types of sensors and instrumentation used in water and waste water applications. It goes into detail on how pressure, temperature, and flow sensors work, the different types an operator may see out in the field, and how to pick the proper instrument. We'd cover pressure transducers & transmitters, RTD's & thermocouples, and various types of flow meters.
