

Drawing The Curtains On Windows XP - What Does The End Of Win Xp Mean For Scada Systems?

Presenter(s):

Matthew Cowell, Phoenix Contact

Abstract: After 12 years, Windows XP will cease to be supported as of April 8th 2014. This means no longer can Win XP be purchased but more importantly no more technical support or security updates. As PC's are a common operational piece to the SCADA puzzle, learn what this means for both existing and future SCADA systems. Primarily this topic revolves around network security and the impact to the overall system. The presentation discusses different approaches to mitigate this development.
