

Integrating SCADA with Other Plant Systems

Presenter(s):

Scott Dappen, SCADAware

Josh Niemi

Abstract: A presentation discussing the advantages of converging supervisory control systems with other plant systems. Focus on the capabilities and advantages of integrating outside systems with the plant SCADA system. Topics may include: Utilizing CMMS interface with plant equipment to allow for predictive maintenance and improved preventive maintenance programs. Integration of data entry system such as lab data to allow for a data repository and allow for automated report generation. Implementation of facilities management and power monitoring within SCADA applications. Site security within SCADA applications
