  205 F Street, Phillipsburg, KS

- FORT SCOTT | May 29, 2019 | Fort Scott Comm. College
  Ellis Family Meeting Rooms, 2108 S. Horton St, Fort Scott, KS

A.M. KAN WORK! is a program developed by the New Mexico Environmental Finance Center under contract with the Kansas Dept. of Health and Environment and presented by the Wichita State University Environmental Finance Center & Kansas Municipal Utilities.
In the coming years, water and wastewater utilities will need to implement new administrative systems and management tools to allow them to adapt to increased regulatory requirements and environmental complexities. A.M. KAN WORK! is one of the “new” tools to help communities address:

- new and stricter regulatory requirements;
- population changes;
- service demands;
- limited water supplies;
- variable climate conditions;
- aging infrastructure;
- increased energy costs; and
- limited state and federal funding.

Asset management is a relatively new program to Kansas and Kansas utilities, particularly for water and wastewater systems. A.M. KAN WORK! provides a structured program for helping water and wastewater utilities achieve sustainability through sound management practices.

This workshop can assist your utility system in defining the investment priorities for the level of service expected by your customers. Asset management provides the tools needed to actively and consistently analyze current operations and future needs to develop robust management systems and well-designed infrastructure plans to meet the increasing challenges.

Water and wastewater operators can receive 5 hours of certification credit for attending this workshop.
