

In order to assist our members in achieving their sterile and non-sterile compounding requirements, the following resources have been compiled. Please note that MSHP was not involved in the creation of the content featured in these presentations, nor is this seen as an endorsement of one product over the other. This serves as a reference for available content for our members to evaluate. It is ultimately the responsibility of the pharmacist to ensure the learning activities satisfy the requirements put forth by the Board of Registration in Pharmacy. The updated continuing education requirements can be found here: <http://www.mass.gov/eohhs/docs/dph/quality/boards/pharmacy/alerts/pharmacist-continuing-education.pdf>

MCPHS
