8-Week Course

The POD program is an 8-week course where each week the attendees will be given training materials and working assignments.

The goal of the course is to build competence, confidence, and understanding of public water system knowledge necessary for the successful operations and management of any water utility in Minnesota.

Subjects studied during this course include:

- General Math
- Filtration
- Membrane & Ion Exchange
- Disinfection
- Water Quality
- Regulations
- Source Water
- Sampling

Come prepared with questions and ready to participate in open conversations.

For More Information Visit: www.mnawwa.org /POD

"We feel the training was very good and we will want all of our water utility staff to take the course"

"I enjoyed the class and would consider another one in the future."

"I took this class to continue my knowledge of water treatment and become a better operator."
