MADE PERSONAL
UNDERSTAND YOUR UNIQUE GENETIC MAKEUP THAT DEFINES YOUR SKIN HEALTH

1. **Elasticity and Firmness**: As we age, certain variants of the genes involved can affect how quickly structural proteins break down. By looking at genes that impact collagen, the SkinHealth Genetic Test assesses risks of wrinkles, eye laxity, skin glycation and premature aging, which can be countered with quality care and treatment.

2. **Skin Condition**: Our body produces oil to help keep our skin soft and supple, but if too much oil is produced, it can lead to acne flare-ups and an oily shine. Balance is the goal for everyone since too little oil can lead to dehydration with flaky patches or show fine lines while still feeling greasy or oily. Your genetics can determine if you’re more or less likely to produce excess oils, and you can adjust your care accordingly.

3. **Environmental Sensitivity**: Skin inflammation can come in many forms, from occasional rashes accompanied by skin itching and redness to chronic conditions such as eczema, rosacea, seborrheic dermatitis, and psoriasis. These conditions are often triggered by your environment. Sun damage can also be difficult to hide or reverse, so prevention is the best remedy. Genetics can provide clues on how to protect your skin from these sensitivities.

4. **Vitamins and Antioxidants**: Eating plenty of fruits and vegetables rich in nutrients is good for your whole body, including your skin. Vitamins A and D both play essential roles in skin renewal and repair. Antioxidants can be incredible anti-aging molecules, but not everyone produces them in the same capacity. Your genetics impact how your body uses these micronutrients, and the right skin care can work to counter these effects.

HOW IS MY DNA TESTED?

To gather your unique DNA, the simple and painless test requires only that a cotton swab be rubbed on the inside of your cheek. The sample will be delivered and analyzed in our state-of-the-art laboratory and you will receive your report in approximately two weeks.
AGS SKINHEALTH GENETIC TEST PROVIDES YOUR OVERALL GENETIC SKIN CATEGORY

While you cannot change your genetic makeup, you can take active steps to reduce the risk of certain negative skin effects. Personalized genetic information allows you to focus on the modifiable lifestyle factors such as your skin care regimen, what products you use, and altering your diet or adding appropriate vitamin supplements to encourage skin repair. To support your effort to achieve healthy skin, AGS has developed a proprietary algorithm that identifies Your Overall Genetic Skin Category. In this section of your report, a name such as Eve, Sage, or Poppy will be displayed. Your skin category takes each of your genotypes into consideration and provides a general overview to help tailor your skin care.

YOUR PERSONAL GENETIC TEST REPORT

Your easy-to-read report includes a simplified one-page summary for a quick review of your overall skin health. Because we are transparent in our reporting, your report includes a detailed analysis of your genetic profile along with your specific genotypes. Being aware of your genetic tendencies allows you the ability to reach your skin health goals.
Advanced Genomic Solutions (AGS) is an international leader in genomic testing that empowers clients with their unique genetic data. AGS simplifies and summarizes complicated genetic data into an easy-to-read report to educate clients to make more informed healthcare choices. With headquarters both in Scottsdale, Arizona and Central, Hong Kong, it offers nine best in class genetic tests. AGS’ laboratory is CAP and CLIA accredited.

PRIVACY STATEMENT

Unlike other genetic companies, AGS does not sell or transfer our clients’ data or any personal information. AGS adheres to strict confidentiality and privacy laws that ensure all our clients’ genetic information is kept private. We pledge to uphold the highest standards of bioethics and maintain rigorous policies and procedures to keep your data safe and secure. We will not even share your DNA data with your physician without your permission and we will never sell your data. No exceptions. You are protected by AGS GeneShield.
