The Effects of Post-Secondary Educational Attainment in New Hampshire

Annual State GDP

For each additional post-secondary graduate, the annual GDP of New Hampshire will increase by approximately $128,071.

Lifetime State GDP Impact Per Graduate

- The average increase in the New Hampshire state GDP over the lifetime of the graduate will exceed $1.4 million in present value dollars.
- For each additional post-secondary graduate, an additional 7.1 support jobs will be generated throughout the New Hampshire economy.
- In addition, household incomes and expenditures will change as more individuals graduate from post-secondary schools. Home values of the graduate are expected to be $146,218 higher, on average, than for those with a high school diploma.
- Post-secondary graduates are more likely to invest in capital assets, which will increase the long-run growth rate of the state economy.
- Improved incomes and lifestyles associated with college graduates will increase automotive and transportation spending by $2,981 annually per graduate relative to a comparable individual without a postsecondary degree.

Broad Tax Base

Each post-secondary graduate will expand the tax base by an average of $4,325 annually, paying back the state portion of post-secondary expenses within 5.9 working years, thus reducing the pressure on tax rate increases.

$4,325 Reduced pressure on tax rate increases each year

$146,218 Higher Home Values

Improved Incomes and Lifestyles

Associated with college graduates will increase automotive and transportation spending by $2,981 annually per graduate relative to a comparable individual without a postsecondary degree.

$2,981 Increased automotive and transportation spending per year

METHODOLOGY

Traditionally GDP is not reported on an educational basis, the way earnings or unemployment metrics are. However, it is important to understand how education contributes to economic activity and the link between education and GDP is known to exist, though not regularly reported. We want to show the direct economic consequence of post-secondary graduates to each state’s economy. To do this we match the GDP-industry data, the industry-to-occupation data, and the occupation-to-education data for each state. After those mappings are compiled, we adjust the GDP, earnings, and tax data to account for known biases (e.g., ability biases) in the data. The result is the direct annual contributions to GDP resulting from the education of post-secondary graduates. It is best to interpret the results as average differences in economic activity between the state’s graduates and non-graduates. Those differences are forecasted and then discounted to present value terms to estimate the additional lifetime contributions to GDP from each graduate.

It is also important to understand that graduates often rely on the support of other graduates and non-graduates. CEOs and Accountants need staff, and we all need and depend on retail clerks, garbage handlers, etc. Because support occupations play an important role, we report the average number of support jobs necessary for per graduate. Lastly, as a metric of improved lifestyle we show the increased annual spending of graduates on housing and transportation. These spending categories represent proxies for additional disposable income to graduates.

With the exception of the support jobs, the results of the fact sheet should be viewed as marginal gains to both the average post-secondary graduate and society as a whole.

DATA SOURCES

Data utilized for this study were as follows and sources for the lifetime earnings trajectory and bias corrections came from various journal articles.

**Educational Attainment by Occupation:** American Community Survey Public Use Microdata, U.S. Department of Commerce, U.S. Census Bureau

**Industry Occupation Staffing Matrix:** Employment Projections, U.S. Bureau of Labor Statistics

**Gross State Product and Taxes by Industry and State:** Bureau of Economic Analysis, Lightcast, Department of Commerce, and Census of Governments, and IMPLAN

**Annual Expenditures by Education Level:** Consumer Expenditure Survey, U.S. Bureau of Labor Statistics

**State Higher Education Funding and Degrees Conferred:** U.S. Department of Commerce, Census Bureau, Governmental Finances and U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System
