

Don't let your loved one become another opioid statistic.

Try **#ChiropracticFirst** *Before* Opioids

↪ **Why Chiropractic?**

Chiropractic is a safe, cost-effective, non-invasive, drug-free form of healthcare that helps **prevent opioid addiction** by avoiding addictive prescription drugs in the first place.

↪ **Why does this matter?**

North Carolina contains 4 of the top 25 cities with the highest opioid abuse rates, including #1 Wilmington. However, with over **2000** licensed **North Carolina Chiropractors** we can change these numbers and help citizens manage neck and back pain without opioid prescriptions.

↪ **Don't just take our word for it, the ACP agrees.**

The **American College of Physicians** updated their guidelines this year and **recommend chiropractic** and other non-invasive, non-drug treatments of back pain **before** turning to prescription **opioids**.
