Washington, DC**

# APRN Education for Emergency Preparedness and All Hazards Response: Resources and Suggested Content 2007

## Background

Given the world situation since September 11, 2001, and the subsequent high impact events, advanced practice registered nurses (APRNs) are essential participants in all hazards response. A National Panel of experts and nursing stakeholders (see Appendix) convened to identify *suggested* curriculum content to guide APRN education in emergency preparedness and response to high impact events. The National Panel agreed to use an adapted version of the “Emergency Response Clinician Competencies in Initial Assessment and Management” (hereafter referred to as the HRSA competencies) as the organizing framework for this document. The Association for Prevention Teaching & Research (APTR), in collaboration with the Center for Health Policy/Columbia University School of Nursing, developed these nationally-vetted 11 clinician competencies currently promulgated by the Health Resources and Services Administration (HRSA) in their use for evaluating *Bioterrorism Training and Curriculum Development Program* (BTCPD) sites. The National Panel has delineated suggested APRN educational broad concepts and considerations for development of content within the HRSA competencies framework.

## Guide to Using this Document

The purpose of this document is to be a resource to APRN educators and is not meant to be prescriptive. It attempts to provide a framework that reviews the roles and opportunities for APRNs in all phases of disaster response: planning, event response, recovery, and mitigation. Recognizing that educators may find it overwhelming to consider integration of all the suggested content, the National Panel identified the critical content areas that should be considered. See section “**APRN Competencies and Content at a Glance**” for the competencies and the critical content areas. **Table 1** then provides a comprehensive overview of the suggested educational concepts, content, and associated content resources to prepare APRNs to meet the HRSA/Columbia U competencies.

The panel realizes that the depth in which APN programs may want to consider this suggested content will vary depending on their interest, geographical location, mission and vision of their programs, and inherent disaster risks to their surrounding communities. Educators might pick and choose from Table 1 the content and resources that capture the critical content areas and are most-suited to their programs. The suggested areas of content can easily be integrated into courses currently being offered, or as one stand alone course, or as multiple courses making up a specific specialty or major and/or for continuing education courses and conferences.

**Example of selected content integration:** An example of integrating some of the suggested content into existing courses and incorporating with other content areas could be as follows:

**Within population health/community service learning, leadership, and/or APN role courses: (HRSA Competencies number 1, 2, 8 and 9):** Leadership and membership on teams in emergency preparedness and response (NIMS, ICS, HICS); Surveillance Systems for terrorist agents; Community Response to Emergencies and Disasters; Roles of the APN in Emergency and Disaster Response

**Ethics Course or Content Area (HRSA Competency 2 and 6):** Triage and rationing of limited resources

**Research and Theory Course(s) (HRSA Competency 11):** Program Evaluation; Research in Disasters (lack of)

**Specific content areas (HRSA competencies 3-10):**

**Respiratory Conditions:** Pneumonic Plague (Biological Agent); Inhalation Anthrax (Biological Agent); Tularemia (Biological Agent); Lung Damaging and Choking Agents (Chemical Agent)

**Dermatologic Conditions:** Bubonic Plague (biological agent); Cutaneous Anthrax (biological agent); Small Pox (biological agent); Blister/Vesicants (Chemical Agent); Burns related to radiation (nuclear/radiological agent).

**Neurological Disorders:** Botulism (bio agent); Nerve agents (chemical agent)

**Infectious Diseases:** Personal Protective Equipment (along with discussions of isolation/respiratory precautions etc.); Small Pox (bio agent); Viral hemorrhagic Fevers (bio agent); Plague (bio agent)

**Cancer Treatment:** Nuclear/radiation sickness/exposure (nuclear/radiological agent)

**Trauma:** Blast, explosive agents/events (Explosive agents)

**Psych Mental Health:** PTSD (related to Emergency and disaster situations); Management of Concerned Citizens (worried well)

## Glossary

The following is a glossary of acronyms and terms used in this document.

<b>CBRNE</b>	Chemical, Biological, Radiological, Nuclear and Explosive (and includes influenza)
<b>DHS</b>	Department for Homeland Security [U.S. Government]
<b>DOD</b>	Department of Defense [U.S. Government]
<b>DPH</b>	Department of Public Health
<b>EOC</b>	Emergency Operations Center
<b>FEMA</b>	Federal Emergency Management Agency [DHS]
<b>HHS</b>	Department of Health and Human Services
<b>HICS</b>	Hospital Incident Command System
<b>High Impact Event</b>	Includes CBRNE, emerging and re-emerging infectious diseases, including pandemic influenza, natural disasters, and other high impact events resulting in multiple, possibly mass, casualties.
<b>IED</b>	Improvised explosive devices
<b>JIC</b>	Joint Information Center
<b>JIS</b>	Joint Information System
<b>JC</b>	Joint Commission on Accreditation of Healthcare Organizations
<b>MCI</b>	Mass Casualty Incident
<b>NGO</b>	Non-Governmental Organization (e.g., American Red Cross)
<b>NIMS</b>	National Incident Management System
<b>PPE</b>	Personal Protective Equipment
<b>PTSD</b>	Post traumatic stress disorder
<b>START</b>	Simple Triage and Rapid Treatment
<b>JumpSTART</b>	Pediatric MCI Triage Tool. Principles of multicasualty triage

## APRN COMPETENCIES & CONTENT AT-A-GLANCE

The National Panel adapted slightly the nationally-vetted 11 clinician competencies originally developed by the APTR and Columbia University (“Emergency Response Clinician Competencies in Initial Assessment and Management”) and subsequently promulgated by HRSA in evaluating *Bioterrorism Training and Curriculum Development Program* (BTCPD) sites. Listed with each competency is the suggested, critical content to include in APRN curricula. This “**Content At-A-Glance**” may help to guide APRN educators in selecting content to infuse into the curriculum to ensure that all APRNs have a foundation of knowledge for disaster response. For the full breadth of suggested content for the curriculum, see Table 1, which includes broad concepts, content areas, and resources that correspond with the competencies.

**Competency 1:** Describe expected role in emergency response in the specific practice setting as a part of the institution or community response

Suggested Content

- Review of common roles that the APRN may assume in disaster planning and response: leader/manager, interdisciplinary team member, physical and mental health care provider.
  - ✦ The role that the APRN will play will be contingent upon the mission of the employing agency.
  - ✦ Primary roles for APRNs will likely include management and supervision of care, along with provision of direct care, to individuals or populations
- Identification of institutional response plan and designated role

**Competency 2:** Respond to an emergency event within the emergency management system of the clinical practice, institution and community

Suggested Content:

- The Incident Command system - an overview of the ICS (that will be comparable to the IS 100 Course that can be taken online thru FEMA)
- At least one simulated event or table top requiring minimally verbalized response that shows ability to respond within a planned system

**Competency 3:** Recognize an illness or injury as potentially resulting from exposure to a biologic, chemical or radiological agent and explosive-incendiary devices possibly associated with a terrorist event: a) recognize uncommon presentations of common diseases and distinguish these from common presentations of uncommon diseases that may be related to a terrorist event or emerging infectious disease; and b) recognize emerging patterns or clusters of unusual presentations

Suggested Content:

- Review of Class A biological agents and selected other biological or chemical agents (nerve agents, cyanide, vesicants, pulmonary agents and riot control agents), radiation and incendiary/explosive devices, including common symptoms.
- Active and passive surveillance systems as source of alerts to clinicians, including (active) individual case reporting or case finding, and (passive) ED complaint logs, EMS call type logs, pharmaceutical sales for prescription and OTC drugs).
- Clinical case review requiring differential diagnosis of at least some of these conditions

**Competency 4:** Institute appropriate steps to limit spread, including infection control, decontamination techniques, and use of appropriate personal protective equipment

Suggested Content:

- Types of precautions and recommended methods or precautions (based upon procedures of employer and suspected organism or agent)
- Correct selection of appropriate level of Personal Protective Equipment (PPE) to a situation/event.
- Principles of and techniques for decontamination
- Monitoring of decontamination staff for illness or injury during or after the process

**Competency 5:** Report suspected or identified cases or events to the public health system to facilitate surveillance and investigation using the established institutional or local communication protocol

Suggested Content:

- Accurate completion of required reports to appropriate organizational unit
- Regulations for reporting communicable diseases and reporting process

**Competency 6:** Initiate patient care within your professional scope of practice and arrange for prompt referral appropriate to the identified condition(s)

Suggested Content:

- Accurate description of priorities for process:
  - ✦ Scene safety, keep yourself safe, triage for mass casualty and epidemics
- Description of initiation of care and either continuing or referring, always using the most up to date information, with situation/case examples

**Competency 7:** Use reliable information sources for current referral and management guidelines

Suggested Content:

- Identification and utilization of standard, reliable resources: CDC, State Department of Health, NIH, Professional Organization guidelines, etc.

**Competency 8:** Provide reliable information to others (e.g., institutional administration or media), as relevant to the specific practice site and emergency response protocol

Suggested Content:

- Description of the communication chain of command within the organization and between the organization and the media or external agencies. Distinction of the PIO or designee to speak for the organization.

**Competency 9:** Communicate risks and actions taken clearly and accurately to patients and concerned others

Suggested Content:

- Basic principles of risk communication

**Competency 10:** Identify and manage the expected stress/anxiety associated with emergency events, making referrals for mental health services if needed

Suggested Content:

- Application of basic crisis recognition and intervention techniques, such as
  - ✦ Understanding importance of and is able to locate appropriate sources for psych mental health follow up
  - ✦ Recognizing symptoms of fellow responder decompensation
  - ✦ Recognizing the importance of periodic rest for responders

**Competency 11:** Participate in post-event feedback and assessment of response with the local Emergency Management and public health system and take needed steps to improve future response

Suggested content:

- Articulating the essential elements of a post event response evaluation.
- Demonstration of case example

**TABLE 1. APRN COMPETENCIES WITH COMPREHENSIVE SUGGESTED CONTENT & RESOURCES**

This table provides a comprehensive overview of the *suggested* educational concepts, content, and associated content resources to prepare APRNs to meet the adapted HRSA/Columbia U/APTR competencies. This material builds on the above “Content at a Glance” and includes extensive content and resources from which educators may pick to integrate into curricula. The National Panel realizes that the depth in which APRN programs may want to consider this suggested content will vary depending on their interest, geographical location, mission and vision of their programs, and inherent disaster risks to their surrounding communities. As stated previously, the suggested areas of content can easily be integrated into courses currently being offered, as one stand alone course, or as multiple courses making up a specific specialty or major and/or for continuing education courses and conferences.

COMPETENCIES HRSA/Columbia U/APTR	APRN EDUCATION BROAD CONCEPTS	CONSIDERATIONS FOR DEVELOPMENT OF CONTENT	RESOURCES
<p><b>1. Describe</b> expected role in emergency response in the specific practice setting as a part of the institution or community response.</p>	<p>The APRN assumes the role of manager and/or team member as appropriate in disaster preparedness, response, &amp; recovery:</p> <ol style="list-style-type: none"> <li>1. Incorporates a pro-active role in anticipation of the risks and vulnerabilities of the institution and community.</li> <li>2. Seeks involvement in the All Hazards Disaster Planning efforts and policies of local healthcare &amp; other institutions and communities.</li> <li>3. Understands/analyzes the health care and public health systems and other sectors with which they interact.</li> <li>4. Understands federal, state and local legislation related to the Public Health Security and Bioterrorism and all hazards responses.</li> <li>5. Assumes a healthcare leadership role, as appropriate.</li> </ol>	<p>Understanding the institutional and community disaster plans where they practice</p> <p>Designing and/or participating in the development of institutional and community disaster plan(s)</p> <p>Understanding own institutional emergency/disaster response plan and one’s own role</p> <p>Understanding the basic tenets of the HICS (Hospital Incident Command System)</p> <ul style="list-style-type: none"> <li>➤ National Response plan</li> <li>➤ National Incident Management System</li> </ul> <p>Understanding the process for conducting a community level hazards vulnerability assessment and its implications for planning.</p> <p>Understanding the importance for developing linkages and relationships with:</p> <ul style="list-style-type: none"> <li>➤ Interagency groups</li> <li>➤ Mutual Aid Cross-jurisdictional agreements</li> <li>➤ Other health care agencies and organizations working together during a MCI- Development of Memorandums of Understanding with other health care facilities and agencies</li> <li>➤ NGOs</li> <li>➤ Non-medical workers and volunteers</li> <li>➤ law enforcement</li> </ul>	<p>The nature of this curriculum guidance for APRN education is based on high impact events that are likely to initiate a local, state, and/or National response and as such the suggested references are predominantly from the state and national and/or organizational level. It is important to use resources and references that are <b><u>routinely reviewed, updated and revised as appropriate as best practices may change</u></b> based on the best available evidence and lessons learned. They serve as resources for consideration for further information regarding the suggested content.</p> <p>National Response Plan (NRP)  <a href="http://www.dhs.gov/xprepresp/committees/editorial_0566.shtm">http://www.dhs.gov/xprepresp/committees/editorial_0566.shtm</a></p> <p><a href="#">National Response Base Plan and Appendices (PDF, 114 pages, 2MB)</a></p> <ul style="list-style-type: none"> <li>• <a href="#">Full Version (PDF, 426 pages, 4MB)</a> including all annexes, "Emergency Support Function Annexes", "Support Annexes", and "Incident Annexes."</li> <li>• <a href="#">Notice of Change to the National Response Plan (PDF, 51 pages - 451 KB)</a></li> <li>• <a href="#">Quick Reference Guide to the National Response Plan</a></li> </ul>
