APPENDIX E

CLINICAL SITE VISIT NOTIFICATION TO PRECEPTOR

Note: This note may be used to provide information to the preceptor and the facility on clinical site visits.

A faculty member will arrange, through the student, a clinical site visit each semester per program guidelines. Site visits assist faculty in determining if there is adequate opportunity for the student to meet the learning objectives and the nurse practitioner role and population-focused competencies. Site visits will include faculty observance of the student in direct patient care and a discussion of the student’s performance between the faculty and preceptor. Faculty understand preceptors’ time constraints and will make the debate succinct. If a concern arises in the clinical setting by a student or preceptor, the supervising faculty must be contacted. The supervising faculty will decide regarding additional site visits and follow-up with the preceptor and student.
