

NORA Position on Banning Used Oil Filters from Landfills

NORA advocates a prohibition on the disposal of oil filters in landfills wherever collections systems and filter recycling options are in place.

In addition, other policies should be considered. These include:

- Educating filter generators and the public of the financial and environmental benefits of ending land disposal of oil filters and the availability of recycling options;*
- Penalties and fees for land disposal of oil filters; and*
- Incentives such as refunds should be considered to generators for properly recycling.*

Approved by the NORA Board of Directors June 24, 2013
