No dinosaurs were harmed in the making of our base oils.

Gen III products don’t come out of the ground, or end up there.

Gen III Oil Corporation recycles motor oil through an evolutionary re-refining process to produce high grade Group II+ and Group III base oils for use in API certified formulations.

Find out more about our products and our new refinery project at www.geniiioil.com

Making the grade with Air Products’ hydrotreatment lab

Establish a viable Group III process from used oil or optimize your current Group II or II+ process

Let Air Products help optimize your hydrotreatment process for complex used oil products. Running your product through our state-of-the-art Hydrogen Reactions lab can help you to:

• Improve product quality
• Optimize hydrotreatment severity
• Optimize hydrogen to oil ratios
• Compare catalyst performance
• Understand/solve issues from impurities

Put Air Products’ decades of experience with hydrogen generation, production, application technology, and reliable supply to work for you. Schedule a trial today!

1984
NORA Celebrates 35 Years of Protecting and Growing the Liquid Recycling Industry

Back in 1984, Apple introduced the first Macintosh computer, the Soviets boycotted the Los Angeles Olympics and Ronald Reagan defeated Walter Mondale.

That same year, the Hazardous and Solid Waste Act was passed which included serious threats to the interests of responsible used oil recycling companies. Primary among the threats was the potential that used oil would be listed as a hazardous waste. A group of individuals that included Bill Ward, Bernie Snyder, Chris Harris and Alan Gressel met at Eastern Oil in Virginia and decided to form NORA as a trade association.

The association was committed to Management Standards for recycling used oil and strongly opposed listing used oil as a hazardous waste.

NORA was successful. EPA has referred to the Used Oil Management Standards as its most successful management standards program. All across this country, this industry responsibly handles hundreds of millions of gallons of used oil and related materials.

NORA has grown from a handful of people to over 300 companies. NORA’s mission remains the same today as it was in 1984: to protect and grow the liquid recycling industry.

Since its founding, NORA and its members have been explaining about used oil and related materials and how the recycling system works in many different forums. The various audiences have included Congress and state legislatures, the U.S. Environmental Protection Agency, the U.S. Department of Energy, the U.S. Department of Transportation, the Federal Trade Commission, state agencies, federal and state courts, the American Society for Testing and Materials (ASTM) as well as several think tanks that produce studies and reports.

NORA’s accomplishments on behalf of the industry are too numerous to list in this article. NORA has helped improve the market for collectors, processors and marketers of used oil, wastewater, antifreeze, filters and others.

Today, we continue to work to keep your business healthy by monitoring and addressing issues and legislation at the federal, state and local level and keep you informed through email NORA alerts, the Liquid Recycling Magazine and meetings.

If you are a member, thank you for your support that enables us to protect and defend the industry. If you know a peer or competitor in this space that is not a member, encourage them to join the association.

If you are not a NORA member yet, please consider joining now. In addition to supporting government affairs efforts, NORA also provides industry knowledge, networking and business development tools.

Contact me if you are interested in learning more.

NORA Conference
NORA is committed to making the 2019 NORA Conference a successful event where you will be able to build and maintain strong relationships in the liquid recycling industry.

The two largest issues before us, IMO 2020 and the current Department of Energy used oil study, will be addressed.

The conference is shaping up to be an outstanding event that will help current members prepare for 2020.
In a long awaited action, the EPA has just repealed the WOTUS Rule that the EPA and Army Corps of Engineering (COE) finalized under the Obama Administration in August 2015. WOTUS has been considered by many to be the most extreme overreach of federal authority ever asserted by these agencies, and it has created “nightmares” for industry and the public. It is said to have greatly expanded the definition of regulated “navigable waters” under the Clean Water Act to include extremes like rainfall “mud puddles”, and there are numerous other examples of its ominous impact. It covers adjacent areas and waters to navigable waters, even if these areas were dry most of the time except during rainfall events.

There has been an example of abuse caused by WOTUS given by President Trump, this was where a Wyoming rancher was fined $37,000 a day by the EPA for digging a small watering hole for cattle on his land. Another case presented by others to the U.S. Senate was where an Indiana farmer cleared trees from his property to expand his farmland where there was no visible permanent water. The Corps claimed it destroyed the existing stormwater drainage patterns and said it was a tributary covered by WOTUS. The Corps would have the farmer go through the government permitting process which can take years to hopefully get their permission to clear this area.

The 2015 WOTUS Rule could negatively

Environmental Protection Agency Administrator, Andrew Wheeler, signed a document to revoke the Waters of the United States rule, an Obama-era regulation that provided federal protection to many U.S. wetlands and streams, Thursday, Sept. 12, 2019, in Washington.
impact any new construction activity such as a NORA member expanding/modifying its facility/site, building a home, etc. For example: 1) It could impact building a new SPCC containment area that would modify the rainfall runoff area on your facility. 2) the building of a plant expansion in a green field area where there are ditches that are only wet during storm events. In these cases it could easily take more than a year to secure approval from the EPA and COE.

This brings to mind the current events of Tropical Storm Imelda that resulted in many thousands of businesses and homes being flooded for the first time in Texas and Louisiana. This has probably created a new flood plain area that would have been governed by WOTUS resulting in more problems and delays for these unfortunate areas.

The good news is that WOTUS is now repealed and the regulatory process to develop more reasonable and practical definitions has already begun. NORA will stay abreast of the developments. Essentially all of the large Industrial Trade Associations in Washington, D.C. are working to make sure the new definitions of navigable waters are much more practical and good for economic growth. Also included are requirements on EPA and COE that the permitting process must be completed within 12 months. NORA will continue to coordinate with the other industries.

This is only a very brief overview of the repeal of WOTUS and the activities being undertaken to correct it. If you are interested in more details, you can contact me at Jack. Waggener@aecom.com or 615.224.2133.
DOE Stakeholder Meeting Info Announced

The US Department of Energy has announced information about the upcoming meeting on the “Beneficial Reuse Options for Used Lubricating Oil.” NORA members are invited to participate in the meeting that will be held on Wednesday, October 16, 2019 from 1:00 p.m. to 5:00 p.m. EST.

The meeting will be held at the U.S. Department of Energy (DOE) in Washington D.C. Members can also participate via Webex. If NORA members have questions about the meeting, they may be directed to: Evan Frye by email at Evan.Frye@hq.doe.gov, or telephone: (202) 586-5600.

Valicor Acquires Action Environmental & Strength Environmental

NORA member Valicor Environmental Services recently expanded its network of wastewater processing facilities through the acquisition of Action Environmental ("Action"). Action operates a centralized wastewater treatment ("CWT") facility in Fort Wayne, Indiana. This will enable Valicor to enhance its existing Midwest footprint and strengthen its position in the region.

In addition, Valicor also recently acquired Strength Environmental ("Strength"). Strength operates a CWT facility in Inkster, Michigan. This will enable Valicor to enhance its existing Midwest footprint and further strengthen its position.

Valicor has increased its number of CWT plants from five to 14 in just over 24 months as it focuses on growing its national footprint.

Liquid Environmental Solutions (LES) Acquires Lyles Grease Trap Services

LES recently acquired the assets of Lyles Grease Trap Services, a provider of grease trap and used cooking oil services in the Little Rock area. Lyles, based in Little Rock, adding a network of non-hazardous wastewater customers to the existing LES operation in Central Arkansas. These customers own grease traps, interceptors and used cooking oil containers that must be serviced regularly to prevent sewer spills and protect the public wastewater collection system.

Jerry Sheridan, LES Chief Executive Officer, also commented: “I’m very pleased to welcome Lyles’ wastewater service professionals and their loyal customers to our Little Rock operations branch. We look forward to their outstanding contributions.”

Brown Gibbons Lang & Company Celebrates 30 Years

NORA member, Brown Gibbons Lang & Company (BGL), an independent investment bank and financial advisory firm, is celebrating its 30th anniversary this year. From a single desk and phone in 1989, BGL today has nearly 100 professionals and several offices across the U.S. The firm is managed by Michael E. Gibbons and his fellow Executive Committee members: Effram E. Kaplan, Andrew K. Petryk, John C. Riddle, and John R. Tilson.

While BGL focuses on mergers and acquisitions, the firm offers a full suite of corporate finance services including institutional private placements, financial restructurings, valuations and fairness opinions, and other strategic financial advisory services.
NORA Presenting at Canadian Event

NORA Executive Director, Scott D. Parker, will present at the Collectors and Processors Meeting in Vancouver, BC, hosted by NORA member, BC Used Oil Management Association (“BCUOMA”). The meeting will be held November 7, 2019. Parker will present on key developments, threats, and opportunities in the North American Used Oil Market.

Parker stated, “NORA is honored to be invited to the Collectors & Processors Meeting to represent NORA members all over the world. The meeting will provide the valuable opportunity to interact with current and prospective members in Canada.”
The marine fuels markets are transitioning rapidly as we approach the 1/1/2020 effective date for IMO 2020 which requires all vessels not equipped with exhaust gas cleaning systems (commonly referred to as scrubbers) to use fuel with a maximum sulfur content of 0.5% on the high seas. This regulatory change will have a major impact on the marine fuel markets. As a result of IMO 2020 the International Energy Agency (IEA) forecasts a 32 billion gallon per year demand decrease for High Sulfur Fuel Oil (HSFO) as well as a demand increase of 17 billion gallons per year of Marine Gas Oil (MGO) and 15 billion gallons per year of Very Low Sulfur Fuel Oil (VLSFO) as replacement fuels. The market for Used Lubricating Oil (ULO) will be negatively impacted by HSFO’s declining demand given the demand for ULO as blend stock for HSFO will also decline. In addition, ULO will face increasing competition from other HSFO blend stocks in the future.

**HSFO Pricing relative to Crude Oil**

The price of HSFO significantly impacts the price of ULO in many markets as ULO historically has been priced at a percentage discount to HSFO. The chart below shows the price relationship of HSFO to crude oil for 12 months historically and 16 months forward. This chart illustrates the dramatic negative impact of IMO 2020 on future HSFO prices. Over the past 10 months

---

**Sources:** Historical - S&P Global Platts, Future - CME Group HSFO, WTI, & Brent Futures

*Pricing data as of September 2, 2019*
HSFO prices held a rough parity with crude oil, whereas near-term futures prices indicate a HSFO price decline of almost 40% versus crude oil. IMO 2020 appears to be triggering an HSFO Dead Zone beginning in early 2020. If the commodity futures market proves correct, in the future HSFO will sell at a far lower price relative to crude oil than in past years. Over time, as demand for HSFO increases its price discount to crude oil is expected to decrease, but HSFO prices are never forecasted to return to historic differentials to crude oil. While the chart below was prepared before the drone attacks on Saudi production, on the first trading day after the attack the relative futures price in March 2020 for HSFO versus crude oil increased by only 2.8%, indicating the market believes Saudi production will be fully restored within 6 months.

Supply versus Demand Forecast
Commodity futures market prices are set both by parties hedging physical commodity supply and demand to mitigate risk as well as parties speculating on future price movements with no actual physical supply or demand for the product. An alternative view of future commodity prices utilized by many experts is based on a fundamental projection of future supply and demand (S-D).

S&P Global/Platts is a leading source of crude and refined products data worldwide. The chart above, prepared in June 2019, presents their view of future physical pricing compared to the financial futures pricing for bunker fuels, including MGO, VLSFO and HSFO. The chart illustrates that S&P Global/Platts forecasts HSFO futures and physical prices to generally trade in the same range. In contrast, based on their forecast for VLSFO and MGO S-D balances S&P Global/Platts forecast financial futures prices for MGO and VLSFO to dramatically under-state the actual future physical prices.

Volume versus Pricing
While product pricing receives great attention, in severe market downturns product volumes actually drive product pricing. In steeply declining markets suppliers may choose to sell their product at any price simply to gain the liquidity necessary to continue to operate. Currently, a surplus of ULO seems to be accumulating in the supply chain. Despite this, ULO maintains one unique advantage versus crude oil. The cost to find, drill and produce crude oil is substantial. However, when a ULO generator’s tank (such as a quick lube shop or industrial generator) is full, the ULO must be emptied regardless of price to allow the generator to continue operating.

Source: Richard Joswick, Head of Oil Pricing and Trade Flow Analytics, S&P Global Platts
S&P Global Platts Bunker and Residual Fuel Conference dated June 13, 2019
ULO can even achieve negative value where the generator will be charged rather than paid for the removal. Charging for removal is necessary whenever ULO gatherers cannot sell ULO at a price which allows, at minimum, breakeven profitability. In contrast to the needs of generators and gatherers of ULO, potential purchasers of ULO consider not only cost but also the characteristics of ULO which may render it unsuitable for an intended use or less attractive than alternate streams. As end markets decline rapidly it is increasingly possible that purchasers may elect to source ULO at far reduced prices, or perhaps not at all given limited storage capacity. The rising HFSO surplus in many markets is resulting in large premiums for marine fuels storage and should be a concerning indicator for ULO producers.

Lessons from Singapore
The transition from HSFO to VLSFO and MGO marine fuels is creating substantially increased demand for storage. Singapore is the largest marine fuels market in the world (equal to the next 8 largest ports combined) and there are now at least 17 VLCCs (tankers) storing over 1.4 billion gallons of low sulfur fuel oil components to supply IMO 2020 marine fuels requirements floating off-shore of Singapore. The same intense demand surge for storage will also occur in other ports as HSFO tanks are re-purposed and new low sulfur components are stock piled to satisfy the imminent demand increase for VLSFO and MGO. Lack of storage availability could make ULO’s access to prospective high-volume outlets more challenging.

Non-compliance and Product Quality Risk
Increased scrutiny in selling and marketing marine fuels now is creating higher risks for all users and suppliers in the marine fuels industry. Since January of 2015, only 0.1% fuel oil (MGO) can be burned within Emissions Control Areas (ECAs), which fall within 200 miles of the US and certain other coastlines. The first publicly reported non-compliant fuel violation was brought against ship operator Ionian Shipping and ship owner Lily Shipping. A $3 million fine was caused by the vessel Ocean Princess shifting 3.5% sulfur fuel to a 0.1% sulfur fuel tank where it was burned. (On March 1, 2020 it will become illegal to even carry HSFO on a ship that is not equipped with a scrubber.) This legal action was brought in a US District Court despite the infraction occurring outside of the US. The action was both civil and criminal, signaling that enforcement authorities will vigorously prosecute and make public examples of marine fuel violators, both corporately and personally. Further, risk logically will soon trickle down to suppliers of products deemed to create operational issues, most especially for VLSFO.
What’s Next?
Each potential VLSFO or VLSFO blendstock will be carefully assessed by buyers, balancing economic incentives versus product risks. Initially most VLSFO will be supplied by major oil companies and a select group of reputable, high volume independent refiners or blenders. More information about properties of various types of VLSFO will become known as successes and failures occur with vessels using VLSFO fuels. VLSFO pricing will become more transparent and predictable as volumes increase and trades are executed for longer term commitments versus short term trial transactions. Marketers of VGO made from ULO as a VLSFO blend stock must overcome the triple threat challenges of stability, compatibility, and contaminants. Worldwide demand for MGO will surge to exceed twice current levels as ship operators and owners who are unwilling to accept the initial risk of VLSFO opt to pay more for MGO. MGO will remain a preferred product until suppliers can provide VLSFO that will give shipowners comfort that their vessels can consistently be operated safely on VLSFO.

So hold on to your hats because the next 100 days should provide key insights and greater clarity as to the market effects of IMO 2020 on the used oil industry. It could be a wild ride!

Tom Murray has developed technologies for processing used oil for over 2 decades with 4 issued patents and multiple pending patents. The technologies enable production of premium quality marine fuels and base oils from used lubricating oils. Comments on this article as well as industry developments and opportunities are encouraged and may be directed to tgm@modernfuels.com or 940-300-8790.

Implementing Best Practices: Leveraging Leading and Lagging Indicators

By Chip Duffie

“An ounce of prevention is worth a pound of cure”

BENJAMIN FRANKLIN

Balancing environmental, health and safety (EHS) compliance with trying to maximize productivity and revenue generation is a constant challenge for NORA members. Companies of all size struggle with how to operate within ever-changing regulations while staying in business in a hyper competitive market. Many companies fail to integrate consistent EHS practices into their operations and as a result, often find themselves scrambling to comply with an agency request, customer RFP or even a plaintiff’s demand. One very simple, yet extremely effective, practice that many companies struggle with is to leverage both leading and lagging indicators of risk.

Lagging indicators are those data points that are related to past performance or actions. Spills, OSHA recordable injuries, workers comp claims and vehicle accidents are all lagging indicators. These, and others like them, are critical metrics that every company should be using to track performance and set baselines for compliance and improvement. However, these metrics only allow you to analyze past performance. So how does a company move beyond relying exclusively on TRIR, NOVs and EMR? How can management run an effective EHS program if they are only looking in the rear-view mirror and chasing trends of injuries and incidents that have already happened? For many companies, it is done by
tracking and acting upon leading indicators.

By establishing a practice to track these forward-looking metrics, like training rates, safety committee meeting attendance, and behavior-based observations, a company can significantly improve its chances to avoid problems before they happen. The fundamental value of leading indicators is that management can use them as a predictive tool with the hope of influencing future performance. By tracking things like inspections and near misses, companies can identify program gaps and blind spots. This data can lead to improvements that will prevent future incidents and injuries. Of course, it is impossible to quantify how many incidents or accidents are avoided but using leading indicators will allow you to see consistent improvement in performance and collect feedback from employees.

**Common Leading Indicators NORA Member Can Use**

1. **Employee Training Rates** – Every company wants to ensure that its employees are trained to the job properly. But many companies fail to properly onboard new employees or consistently run training deficiency reports to show which employees need to be trained or retrained.

2. **Behavior Observations** – Most people think of behavior-based safety as near miss reporting, but it is more than that. Tracking near misses and close calls is critical, but identifying positive, safe behavior is important as well. A disciplined and documented observation program can be an invaluable feedback loop that will help your team recognize hazards or non-compliance.

3. **Ergonomic Assessments/Improvements** – Evaluating your workplace for ergonomic risks, such as repetitive tasks that can cause strains, improper work area setup, or improper use of tools, will avoid many common injuries and workers’ compensation claims.

4. **Job Hazard Assessments** – Evaluating each job type for risks and identifying those risks for employees is a best practice that will help get your team operations-ready from day one. This process will also help you
ensure consistent practices and personal protection equipment across your company.

5. Employee Perception/Culture Surveys – Many companies have found employee feedback and engagement to be very valuable in establishing a baseline from which to drive continuous improvement. A best practice is to use a third party to conduct the survey and management needs to have a plan to address concerns and recommendations that are brought up.

6. Routine Site Safety and Compliance Audits – It is important to establish a disciplined cadence of site and equipment inspections. In addition, it is a best practice to engage a third party to review your site and operations to ensure continuous improvement.

Companies that make leading indicators integral to the management of their EHS programs significantly reduce their risk. Without predictive metrics, a company will always be reactionary and can never fully achieve EHS excellence. By incorporating a few key leading indicators into the EHS program, any size company can drive value directly to the bottom line.

Chip Duffie is the President and Founder of EHS Momentum, LLC, a full service EHS consulting and software firm that focuses on empowering small and mid-sized business to implement EHS management systems. Prior to founding EHS Momentum, Chip was Sr. Counsel in the Dallas, TX office of Clark Hill Strasburger where he was a member of the Environmental and Regulatory Team. Chip also served as Chief Compliance Officer for Safety-Kleen and then as SVP, Compliance for Clean Harbors.

**THE NEW GENERATION OF BIOLOGICAL PARTS WASHER**

**Cleaning without solvent!**

**Cleaning Performance** ✔️
**Easy to Use** ✔️
**Operators’ Health** ✔️

**HOW DOES IT WORK?**

1. **BIOLOGICAL PARTS WASHER**
   - The parts washer keeps the bath warm at 38°C.
   - It is equipped with several cleaning possibilities, a filtration system, oxygenation and a lid to avoid evaporation.

2. **BLUE LIQUID**
   - Aqueous-based cleaning solution composed of specific surfactants, non-toxic and non-flammable.

3. **BLUE TABS**
   - Concentrate of microorganisms which continuously purify the cleaning bath.

**THE BENEFITS OF ECOMASTER**

**Operators’ Health**
- Solvent-free – Optimal Health & Safety conditions, non-flammable.

**Performance**
- Superior finish quality compared with solvent. Unsticks dirt & residues.

**Savings**
- No frequent bath draining and minimized maintenance and disposal costs.

**Environment**
- Minimize waste compared with solvent.

---

**Pack SUNSET**
- 1 parts washer premium
- + 5 cans of Blue Liquid SRBLUE+ 5 gallons
- + 1 box of 4 Blue Tablet SRBT

**USER-FRIENDLY**
- BRUSH, SPIGOT, SOAKING
- ERGONOMIC CONTROL BOX
- REUSABLE FILTER

**Fountain Industries** is a leading US-based manufacturer and marketer of parts washing equipment serving the automotive repair and industrial sectors. Our solvent-based and environmentally-sensitive water-based parts cleaning products are sold through distributors and cleaning service companies worldwide and is the largest manufacturer of branded and private labeled parts washers and specialty products.

We take pride in being an industry leader in both design and depth of product offerings. Fountain provides complete product coverage in aqueous and solvent-based equipment and accessories for the cleaning needs ranging from DIY through professional users.
Hydrodec of North America (HoNA) is the first transformer oil company in the world to generate carbon credits for every gallon of used transformer oil they re-refine. The American Carbon Registry (ACR) has approved Hydrodec’s rigorous emissions reduction accounting methodology to generate carbon credits for every ton of carbon dioxide displaced by recycling used transformer oil.

They are now in the process of building ‘Sustainable Partnerships’ with leading utilities with strong Environmental and Social Goals (ESG) policies to exchange carbon credits for their used transformer oil – which otherwise could end up being incinerated. While the carbon credits are currently offered to utilities directly for their used transformer oil, their future strategy can include a closed loop with utilities. To complete the closed loop, there will be an option for utilities to request new transformers, from the OEM’s, to include Hydrodec’s re-refined ‘Superfine’ transformer oil which meets and indeed exceeds the performance required by national and international technical standards with industry leading recovery rates north of 99%.

Hydrodec will work with existing and future collectors of used transformers for the receipt of all their used transformer oil. Where preferred by the utilities, Hydrodec will collect both on-spec and off-spec used transformer oil when separated from the used transformers in the field and could pay for the collection and transportation to their facility in Canton, Ohio. The costs associated with off-spec used transformer oil would be negotiated directly with the utility. In return, Hydrodec will offer their Sustainability Partners carbon credits based on a formula of carbon credits for gallons of feedstock re-refined.

When President Trump signed a bipartisan Bill into law in December 2018 requiring a one-year review of the potential for all used oil to be re-refined, many utilities stepped up their work on environmental best practice to meet the Environmental and Social Goals required by their Boards of Directors, their investor base and customers alike.
By becoming a ‘Sustainable Partner’ with Hydrodec, the utilities can, for the first time, demonstrate their commitment to sustainability by gaining carbon credits for the treatment of all their own waste transformer oil. Hydrodec envisions helping environmentally aware utilities with clear sustainability goals to reduce their carbon footprint and ensure that their used oil is properly handled according to best environmental practices and all Federal Regulations.

Re-use is essential. It keeps products in the consumption sphere for a longer period. It promotes the possibility of diverting waste oil streams discarded by their last user from polluting waste streams and exposing utilities to possible litigation. It encourages ‘Certificates of Origin’ (Non Hazardous Manifest) - a document that certifies all used transformer oil is re-cycled in return for carbon credits with Hydrodec offering utilities a ONE STOP SHOP for all their waste transformer oil.

Using Hydrodec's patented technology, used transformer oil goes through their catalytic hydrogenation and polishing process in Canton, Ohio, which destroys any polychlorinated biphenyl (PCB) molecules and other persistent organic pollutants from contaminated oil, resulting in substantial decontamination and regeneration of the feedstock and restoring the transformer oil to a “like new or better” condition.

With their process, used transformer oil is a 100% recyclable material that can be safely collected and brought back into use again and again. Having invested over $100m developing this world leading technology and having approval by the American Carbon Registry for carbon credits, their hard work is coming to fruition.

Ed Superior is Director of Procurement, Sales & Marketing at Hydrodec of North America. He can be reached at ed.superior@hydrodec.com
The 2019 NORA Annual Conference and Trade Show is the liquid recycling industry’s premier networking and education event. This year’s event will attract over 300 industry leaders. Now is the time to make plans to attend. Everything you need for your plans is included in this magazine.

TRADE SHOW-ALMOST SOLD OUT!
The NORA Trade Show will feature nearly 50 exhibitors with companies displaying the latest products and services available to the liquid recycling industry. See page 40 for the NORA Exhibitor Showcase. Limited spots remain. Contact Britanne Gasser at (703) 753-4277 or marketing@noranews.org to reserve your space.

SPONSOR THE EVENT
Many sponsorship and advertising opportunities are available for the 2019 NORA Conference & Trade Show. For as little as $150, you can support your industry as well as promote your brand. For more information see pages 26-28. Reserve your sponsorship today using the form on page 24 or contact Casey Parker at casey@noranews.org or (703) 753-4277.

REGISTER NOW
Register online to attend the Conference at www.noranews.org or complete the form on page 23.
Naples, Florida • November 13-16, 2019

2019 NORA Conference Registration Form

Complete one form for each person. Only one form required to include payment information.

EXHIBITORS: Do Not Use This Form - Use Exhibit Agreement Form or Additional Booth Personnel Form.

Times in bold represent show hours.
We deliver inspired innovative chemistry solutions to solve our customers’ most challenging problems.

Our syrups feature high-performance and cost-effective chemistries for antifreeze and engine coolant applications. Super Syrups are highly concentrated, stable, single-syrup formulations that enable easy and consistent blending.

Break any emulsion - Oil, Synthetic coolants, lubricants, and cutting fluids. Our natural coagulants will break your tough-to-treat emulsions, while lowering overall treatment costs and increasing treatment process efficiency.

Solid-feed total water treatment systems for cooling towers are simply better than traditional solutions. Eliminate hazardous liquid chemistry and go solid with easy to install, safe to handle, and reliable applications.

Used Oil Recycling. Refined.

Proudly and responsibly collecting over 73 million gallons (280 million litres) of used oil across North America every year.

Visit gflenv.com for more information.
What's in store for your industry and your business over the next year? How can you thrive in this competitive marketplace?

With the quick pace of change within the liquid recycling industry, there has never been a more important time to attend NORA's Annual Conference and Trade Show.

NORA has assembled top-notch speakers and industry experts focusing on the topics liquid recyclers like you requested to provide you with the tools and information you need to succeed in 2020.

Some of the topics that will be explored in Naples in November are listed below:

**IMO 2020: Macro Impact on the Refining & Shipping Industries**
As we get closer to the IMO 2020 deadline of January 1, 2020, the crystal ball is getting clearer on the impact on the refining and shipping industries. It is expected that IMO 2020 will cause over 35 billion gallons per year (~2.4 million barrels per day) to be shifted from High Sulphur Fuel Oil to Very Low Sulfur Fuel. This session will feature a presenter from Argus and will provide the latest impacts on demand for various distillates.

**IMO 2020: Implications for the Used Oil Industry**
IMO 2020 may prove to be the largest greatest potential disruption in the last decade to the used oil industry. This session will focus on the implications for the used oil industry participants, including collectors, distillers and re-refiners. Strategies for preserving and enhancing value for participants by business segment will be offered.

**2020 Economic Outlook**
There is increasing talk about the “R” word: recession. NORA has secured a top rated speaker to address the current state of the economy and what members should expect in 2020 as they build their budgets and business strategies with the best available information.

**Carbon Credits: A NORA Case Study**
A NORA member has successfully been approved by the American Carbon Registry (ACR) to generate carbon credits for every gallon of used transformer oil they re-refine. This session will explore the process and requirements to be approved by the ACR and the practical benefits it provides to a company.

**Processing Technology Panel**
A variety of professionals will provide information on new and innovative processing technologies to help make your facility operate at optimum performance. Areas that will be explored include: alternative feedstocks, new de-ashing technologies, VTAE and others.

**Digital Technology Panel**
A variety of professionals will provide information on new and innovative digital technologies to help members get the most out of their data and operate at maximum efficiency. Areas that will be explored include: e-manifests and ideas to help educate members on potential digital technology choices.

**Government Affairs Executive Summary**
2019 has been a very active government affairs year for NORA and its members– and it looks like it will continue until 2020. The current and future health of the liquid recycling industry is largely dependent on the overall regulatory environment. This session will provide a high level executive summary on issues such as the status of the US Department of Energy Used Oil Study, the Federal Motor Carrier Safety Administration’s changes to Hours of Service, the rollback of the Environmental Protection Agency’s Waters of the US rule and more.
The liquid recycling industry needs a solid insurance partner.

Our experts have been insuring risk in the liquid recycling industry before it was even considered an industry. From transportation and site pollution to product contamination and pollution, Ironshore can protect you from the full spectrum of risk. For more information go to ironshore.com.
Mike Ditka will deliver a powerful presentation that highlights the key characteristics people need to achieve their personal and professional goals. With his first-hand experience, clear illustrations and humorous anecdotes, he will show why he is considered one of the best motivational speakers in all of the NFL. His presentation has impact and immediate, take-home value.

Mike Ditka Bio

Mike Ditka is a former American football player, coach, and television commentator. A member of both the College Football and Pro Football Hall of Fame, he was the 1961 UPI NFL Rookie of Year, a five-time Pro Bowl selection and five-time All-Pro tight end with the Chicago Bears, Philadelphia Eagles, and Dallas Cowboys of the National Football League (NFL).

He was an NFL champion with the 1963 Bears, and is a three-time Super Bowl champion, playing on the Cowboys Super Bowl VI team as well as winning as an assistant coach for the Cowboys in Super Bowl XII, and coaching the Bears to victory in Super Bowl XX. He was named to both the NFLs 50th and 75th Anniversary All-Time Team.

As a coach for the Bears for 11 years he was twice both the AP and UPI NFL Coach of Year (1985 and 1988). He also coached the New Orleans Saints for three years.

Ditka and Tom Flores are the only people to win an NFL title as a player, an assistant coach, and a head coach. Ditka, Flores and Gary Kubiak are also the only people in modern NFL history to win a championship as head coach of a team he played for previously. Ditka is the only person to participate in both of the last two Chicago Bears’ championships, as a player in 1963 and as head coach in 1985.

He is known by the nickname "Iron Mike," which he has said comes from his being born and raised in a steel town in Pennsylvania.

Words From Da Coach:

You’re never a loser until you quit trying.

If you’re not in the parade, you watch the parade. That’s life.

If God had wanted man to play soccer, he wouldn’t have given us arms.

Success isn’t measured by money or power or social rank. Success is measured by your discipline and inner peace.

Sponsor the Keynote Address

For just $2000, your company can be a sponsor of Mike Ditka's presentation and receive the following benefits:

• Exclusive meet and greet with speaker before event
• Your company logo will be highlighted prior to keynote
• Your logo will appear on a large screen behind the speaker during the keynote address

Use the form on page 24 to secure your sponsorship.

The tournament will start at 12:30 PM following opening sessions on Thursday, November 14.

Register
Golf is an add-on to Conference Registration for just $185 + $80 club rental.

Please note that pairings are done by the event sponsor to promote competitive play between teams. Requests for specific golf pairings are unable to be honored.

Register at www.noranews.org/2019ConfGolf or complete registration form on page 23.

About the Course
Acclaimed golf architect Rees Jones designed a par 72 championship course that proves both interesting and challenging. Each hole at this demanding course promises an exhilarating new experience. With extraordinary elevations and unique water features expertly incorporating the indigenous Florida foliage, this course offers stunning fairways for year-round play as well as a newly built, $8 million clubhouse complete with restaurant, pro shop, meeting space and stunning patio with sweeping golf course & lake views.
Cocktails & Catamaran Cruise

On this cruise, you will be entertained by a live narration from the Captain about the Naples area, you will see multimillion dollar homes in the prestigious Naples waterfront community, relax and sail in the Gulf of Mexico, and quite likely see an afternoon Dolphin show!

Join us on the afternoon of Thursday, November 14 for a two hour private catamaran boat tour of beautiful Naples, Florida.

We will depart from the Naples Grande Resort at 1pm. The cruise departs from the Naples City Dock. Following the cruise, you are free to stay and explore the Naples downtown area and return to the hotel at your convenience with an Uber code that will be provided.

The spouse/companion tour is an add-on to spouse/companion registration. Tour fee is only $85/person.

For more information visit www.noranews.org/2019SpouseTour or call 703-753-4277. To register, complete the form on page 23 or register online.
Join your NORA colleagues on Friday, November 15th for the Annual NORA Fishing Expedition.

Boats of 3-4 people will fish using the Captain's live pilchards for bait caught in the bay. The group will move towards Mangrove trees/roots throughout the area by casting the bait up to them.

**The following fish will be targeted:** Snook, Redfish, Spotted Sea Trout, Mangrove Snapper and on occasion Tarpon.

**Registration fee includes:**
- Transportation to and from fishing
- Experienced guide
- Rod, reel and tackle
- Lunch and Beverages

**Registration**
Registration is just $150/person. Register by completing the form on page 23 or visiting www.noranews.org/2019ConfInfo
NORA CLOSING PARTY

To celebrate NORA’s 35th anniversary, please join us for an 80’s throwback at the closing party… Friday, November 15 at the Naples Grande Beach Resort. All exhibitors, attendees, speakers, and registered spouses/companions are invited to attend this great event!

You are highly encouraged to dress 80’s!

Non-Hazardous Processing & Recycling
- all non hazardous material (liquid, solid, multi-phase)
- all CWT wastewater categories (oil, organics, metal-bearing)
- all transportation modes (bulk, drums, totes, pails)

Material Sourcing & Products
- base oils
- RFO product
- recycled product

Transportation Services
- bulk tankers, vacuum tankers, vac trucks, gravel trains, roll-offs, rubber-lined
- Michigan, Indiana, Ohio

Storage Tank Leasing
- 24-hour gated access
- unit sizes from 450K - 3mm gallon capacity
- wolverine pipeline access

NORA Supplier/Vendor Members in good standing as of 9/18/19 are listed below. Companies in bold have an ad in this magazine. Companies with a $ are part of the NORA Save program by offering discounts/value added services to NORA members. Contact NORA to learn more about the NORA Save program. Companies that are in red are exhibiting at the 2019 NORA Conference & Trade Show as of 9/18/19.

---

**AECOM Corporation**  
Jack.Waggener@aecom.com  
615-771-2480  
URS/AECOM Corporation is a full service engineering design firm with over 300 offices and 100,000 employees around the world. Services include environmental engineering consultant - water, air, solid waste, used oil.

**AGC International, LLC**  
adeflorio@agcinternational.com  
651-202-0563  
Manufacturer of Re-refining and Filtration equipment. Provide separation, re-refining and filtration solutions for any and all types of used petroleum products including motor/lubricating oils, marine oil and slops, anti-freeze and transformer oil.

**Air Products**  
info@airproducts.com  
800-654-4567  
Air Products is the world's largest producer and supplier of merchant hydrogen, and a leading global supplier of atmospheric gases such as nitrogen, oxygen and argon.

**Amchem Inc.**  
craig@amcheminc.com  
903-236-0138  
Chemical Distribution

**AMCS**  
nancy.byrne@amcsgroup.com  
800-962-9264  
AMCS provides software for the waste and recycling industry; this includes oil waste and recovery. The software provides detailed history, extensive billing options, container tracking, lab results, profiling, routing and dispatching.

**American Testing Technologies**  
stacy.youssef@gmail.com  
877-634-9906  
We provide a full range of analytical services to petroleum suppliers and users. With over 25 years experience, we offer the highest quality testing of oils, fuels, biofuels, waters, waste, and hazardous waste. Most tests are completed within 24 hours.

**Axelrod Energy Projects, LLC**  
jaxelrod@axelrodenergyprojects.com  
212-749-1902  
Project Development, Brokerage, Market Consulting

**Bedford Industries, Inc**  
david@bedfordindustries.com  
360-770-0612  
Manufacture a full line of oil filter crushers, drum crushers, and oil filter balers. On the market since 1989, the OBERG filter Crusher has stood the test of time.

---

**Blue Process Advisors, LLC**  
mjebert@yahoo.com  
219-841-2124  
Consulting

**Bright Technologies a Division of Sebright Products, Inc.**  
abajric@sebrightproducts.com  
269-793-7183

**Brown Gibbons Lang & Company, LLC**  
ekaplan@bglco.com  
216-920-6634  
Investment Banking Firm

**Brown Industrial Inc**  
craig@brownindustrial.com  
937-693-3838  
Technology leading custom designers & manufacturers of trailers & truck bodies for the rendering, oil filter recovery & recycling industries.

**Build-All Corporation**  
dougp@build-all.com  
Manufacturer of parts washers and degreasing equipment.
Catalyst Trading Co, LTD
rgarcia@resalecatalyst.com
713-926-6078
Hydrotreating Fresh Catalyst, Regen Catalyst, Pre-Sulfided Catalyst, Silica & Phosphorus materials, Reactor toppings, Ceramic support products, screening, recycled ceramic support, High Alumina support, re-packaging, and acquisition of spent catalysts.

ChemTec LLC
bryangray@chemtecllc.com
812-499-8408
Used oil and wastewater treatment chemicals

ChemTreat
jlawson@chemtreat.com
865-250-5434
An industry leading supplier of water treatment and oil processing specialty chemicals.

Clairvest Group Inc
michaelc@clairvest.com
416-413-6007
We are a private equity firm which provides equity capital to help finance organic growth and/or acquisition growth. We have a particular focus on the environmental services industry having completed five significant investments since 2006.

Clark Reliance Purity Products Group
terryb@enervac.com
519-651-1034 x238
Mechanical Separation, Filtration, Vacuum Dehydration, or Absorption, The Purity Products Group delivers protection in critical-use applications.

Coastline Chemical, Inc.
jdsharpley@coastlinechemical.com
757-824-3831 Ext. 103
Antifreeze, Heat Transfer Fluids, Glycols, Lab Services

DOT UNITS

VAC3000 SERIES FEATURES

- 407/412 DOT CONSTRUCTION
- STANDARD STOCK SIZES
  3200 and 3600 gallons
- OPTIONS: VACUUM PUMP/BLOWER/LIQUID RING
  Vacuum pump options from Masport, NVE, Fruitland and Hibon
- INTERIOR BAFFLES
  Flanged and dished head baffles
- HYDRAULIC OPERATION
  Hydraulic vacuum pump, hoist and rear opening door
- FULL REAR OPENING DOOR
- THREE STAGE HOIST
- ALUMINUM HOSE TRAYS
  26” bolt on hose trays
- EXTRUDED SKIDS
  3/8” thick extruded skids
- OPTIONAL OSHA PLATFORM
  OSHA platform and guardrail
- ROLL OVER PROTECTION
- HEAVY DUTY BUMPER
  Step bumper with grip strut steps
- EMERGENCY SHUT OFF
- TRAILER OPTIONS AVAILABLE

ORDER YOURS TODAY BY CALLING 1-800-558-2945 OR VISITING IMPERIALIND.COM.

Imperial Industries, proudly family-owned and operated in central Wisconsin for more than 35 years, is the trusted choice for specialized septic solutions and expert service.
**Dexsil Corporation**  
ckopylec@dexsil.com  
203-288-3509  
On-site test kits that are quick and easy to use, affording the user an economical advantage over time-consuming and costly laboratory methods. Products detect chlorine contamination in used oil, organic chlorine in wastewater, and more.

**Dober**  
saroyan@dober.com  
773-294-1870  
Full service chemical manufacturer specializing in antifreeze additives, oil treatment, wastewater treatment, boiler water treatment, and cooling water treatment.

**Dolphin Centrifuge**  
sales@dolphincentrifuge.com  
248-522-2573  
Dolphin Centrifuge specializes in Centrifuge based Oil Recovery Systems. Our systems are primarily built around New & Reconditioned Alfa Laval Centrifuges. Complete modules include Hi-Speed Disc Centrifuges, Automatic PLC Controls, Feed Pumps, Heaters etc

**Double T Resources Inc.**  
terry.taliaferro@doubletresources.com  
817-996-1198  
Buy/Sale Bulk, Petroleum Distillates, Fuels, Crankcase lubes

**Eastman Chemical Company**  
taihi.egres@eastman.com  
423-229-2000  
Eastman Therminol heat transfer fluids are high-performance fluids specifically designed for precise temperature control, providing superior heat-stability in systems with operational temperatures from -175 degrees to 750 degrees

**Ecosorb International Inc.**  
larry@ecosorb.com  
713-413-1173 x4714  
Environmentally Friendly Absorbents

281-381-8029

Hydrodec of North America, LLC  
cynthia.repasky@hydrodec.com  
330-409-8676  
Used transformer oil re-refiner. Hydrodec collects & processes used transformer oil at any PCB concentration. As the only oil re-refiner to receive carbon credit approval from the American Carbon Registry, their product can be sold with a carbon offset.

ORG CHEM GROUP is a Major Leader in the recycling of used antifreeze in the United States. We work closely with collectors across the U.S. and Canada.

ORG CHEM GROUP purchases used antifreeze which allows collectors a safe, efficient way to properly manage their used antifreeze/glycol streams while at the same time providing them with a consistent revenue stream.

Our process extracts the Ethylene Glycol from used antifreeze, purifies it and blends it with proprietary additives to create new antifreeze that offers the benefits of lower cost and recycling.

ORG CHEM GROUP offers Ethylene and Propylene Glycol for sale and a full line of Antifreeze products available in cases, drums, totes and bulk.

215-300-9122
Zurich’s Environmental unit helps businesses navigate the ever-changing world of environmental risk. Zurich provides easy-to-understand environmental insurance solutions that can be customized to help meet customers’ needs for today and the future.
At Vertex Energy, our focus is simple. We believe the best way to ensure a stronger future is by bringing stability to an uncertain market. That’s why we’ve been collecting, recycling and re-refining used motor oil and other petroleum co-product streams since 2001. By constantly adapting to a changing world, we’re equipped to deliver new and better ways to reduce our dependence on foreign oil.

To learn how we’re Producing Tomorrow’s Energy, visit us at VertexEnergy.com.
