Due to popular demand we’ve created another opportunity to attend this course in 2019 - limited spaces available

Get your teeth into best practice dentistry

With pets living longer, dentistry is now a significant component of companion animal practice and practice income. This course is for companion animal veterinarians wanting to achieve best practice in veterinary dentistry. Do you want to improve dental skills and utilise industry-leading equipment to make dental care easier and offer patients and clients better outcomes?

Learning outcomes
» Increased understanding in oral anatomy and the anatomical landmarks for successful local anaesthesia
» Improved knowledge of gingival flap techniques for soft tissue defects in the oral cavity
» Increased confidence in performing surgical extractions and handling extraction complications
» Learn new techniques for extracting teeth with a new minimally invasive approach
» Improve skills in taking and interpreting dental radiographs

Benefits
» Improve techniques and skills in oral surgery
» Offer a quality dental service and obtain better clinical outcomes for your patients
» Improve practice income by identifying and treating more oral disease
