

## Standardized Nursing Assessment of the Social Determinants of Health Among Ohio's Hospital and Health Department CNOs & DONs, and Among Ohio's Deans of Colleges & Schools of Nursing: *Baseline Survey Results*

**Duration of study: November 4-25, 2016 (three weeks)**

**Total participants: 98**

### EXECUTIVE SUMMARY

#### SURVEY OBJECTIVES:

Measure the formal assessment of social determinants of health (SDH) and the use of a SDH tool at Ohio nursing institutions.

#### PARTICIPANTS

The total number of individuals who received survey was 310

- Of those, 98 responded and either completed or partially completed the survey.
- The following results cover the participants who attempted the survey.
  - Hospital CNOs: 39 responses, 24% response rate (160)
  - Public Health OPHA DON: 33 responses, 69% response rate (48)
  - Colleges & Schools of Nursing: 26 responses, 25% response rate (102)

#### METHODOLOGY

The purpose of this survey was to conduct a baseline assessment for the occurrence of SDH assessment among Ohio public health and hospital nurses, as well as within in nursing academia.

- The survey was developed by a committee of experienced nurses from hospitals, health departments and nursing academic institutions from across the state of Ohio, AND was done in conjunction with the Ohio Action Coalition (OAC).
- The OAC is comprised of members from the American Association of Retired Persons, Ohio Chapter; Greater Cincinnati Health Council; Northeast Ohio Nursing Initiative; Nursing Institute of West Central Ohio; Ohio Board of Nursing; Ohio Council Associate Degree Nursing Education Administrators; Ohio Council of Deans & Directors; Ohio Hospital Association; Ohio League for Nursing; Ohio Nurses Association; Ohio Organization of Nurse Executives; and the Ohio Public Health Association.
- The survey was disseminated through OAC constituency groups, a convenience sampling, that was intended to reach all hospitals, public health departments and colleges and schools of nursing at the RN or higher level in Ohio. LPN training institutions were not included in the sampling.
- The surveys were emailed using *SurveyMonkey™* to hospital, public health and academic nursing program leaders.
- The survey was to be completed by a dean, CNO or DON, or their designee from their respective institution. Only one respondent per nursing-related institution participated in the survey.

#### DATA COLLECTED

Two forms of data was collected:

- *Qualitative*: Qualitative data reported as participant verbatim narrative comments.
- *Quantitative*: Categorical and nominal data describing the occurrence of SDH assessment, training and education.

## Learnings and Common Findings:

- The option to upload documents was a challenge.
- Some participants requested hard word document to review in advance.
- Hospitals and public health surveys similar with three varying questions.
  - *Hosp - Q8: At what stage of the client's hospitalization are the nurses screening clients for Social Determinants of Health? Please select all that apply.*
  - *Hosp - Q9: If your institution has a policy/procedure for the nurses to screens clients for any of the Social Determinants of Health listed earlier, is the screening a formal component of the nursing assessment and documented in the EMR?*
  - *PHN - Q8: If your institution screens clients for any of the Social Determinants of Health listed earlier, is the screening a formal component of the nursing assessment and documented in the EMR?*
- Most answered free text question of hospital survey:
  - *Q12 "If your nurses do receive training on the SDH at the time of hire, please describe the training process" – 12 responses*
  - *Q15 "Please list any other SDH that your health department screens clients for on a regular basis that are not otherwise listed in this survey" – 12 responses*
- Most answered free text question of public health study.
  - *Q14 "Please list any other SDH that your health department screens client for on a regular basis that are not otherwise listed in this survey" – 7 responses*

## KEY DATA SUMMARY & THEMES

### Regarding Hospitals and Health Departments:

- 41% of hospitals and 67% of public health agencies who responded to the survey say that they do not have a formal policy or procedure to screen for SDHs.
- The presence of institutional policies and/or procedures that address screening for *interpersonal violence* was high among both hospitals and health departments (95 and 100% respectively). However the presence of policies/procedures for screening for other of the CMS' five recommended SDHs was significantly lower, ranging from 64% to 82% for health departments, to 4% to 45% for hospitals (based on the particular SDH being assessed). So when screening is occurring, it is predominantly done in the absence of a formal policy/procedure.
- 48% of health departments who say that they screen for one or more of the core SDHs do not include the screening as a part of their nursing assessment documented in their EMR and another 7% are unsure whether they do. This 55% of health departments compares to 97% of hospitals who do include the screening as a part of their nursing assessment.
- For clients who need assistance in attaining a SDH that is assessed for, hospitals provide this assistance internally through hospital case management 88% of the time, whereas health departments predominantly (87%) refer the client to other agencies for assistance.
- 64% of hospitals and 77% of public health agencies say that they do not provide training about SDHs to newly hired nurses, or do not know whether they provide this training.
- 88% of hospitals and 90% of public health agencies say that they do not provide annual training or competency assessments about SDHs for nurses, or do not know whether they provide this training.

### Regarding Nursing Academic Institutions:

- 92% of all RN academic programs responding to the survey say that they incorporate one or more of CMS' five core SDHs in their nursing curriculums. Of those, 46% screened at some point in their curriculum for violence; 38 % screened at some point in their curriculum for food; 31 % screened at some point in their curriculum for housing; 27% screened at some point in their curriculum for transportation; and 12% screened at some point in their curriculum for utilities.
- Regarding CMS' five basic SDHs by academic RN program type:

- 30% of responding associate degree RN programs screen for violence at some point in their curriculum; 25% of them screened at some point in their curriculum for food; 20% screened at some point in their curriculum for housing; 18% screened at some point in their curriculum for transportation; and 8% screened at some point in their curriculum for utilities.
- 21% of responding preBSN programs screened at some point in their curriculum for violence, food, housing and utilities; 15% screened at some point in their curriculum for transportation.
- 24% of responding RN-BSN programs screened at some point in their curriculum for violence; 21% screened at some point in their curriculum for food and transportation; 18% screened at some point in their curriculum for housing; and 15% screened at some point in their curriculum for utilities.
- 29% of responding MSN programs screened at some point in their curriculum for violence; 22% screened at some point in their curriculum for housing, transportation and utilities; 17% screened at some point in their curriculum for food.
- There was no consistency whatsoever among nursing academic programs about at what point in the curriculum nurses are taught about SDHs.

## Hospital and PHN Results

### Q4: Policy/procedure requiring patient/client screening for SDH

**Hospital:** Does your institution have a formal policy and/or procedure requiring nurses to screen clients for any of the five basic Social Determinants of Health?

**PHN:** Does your institution have a policy/procedure for nurses to screen clients for any one or more of the five basic Social Determinants of Health as defined by CMS?

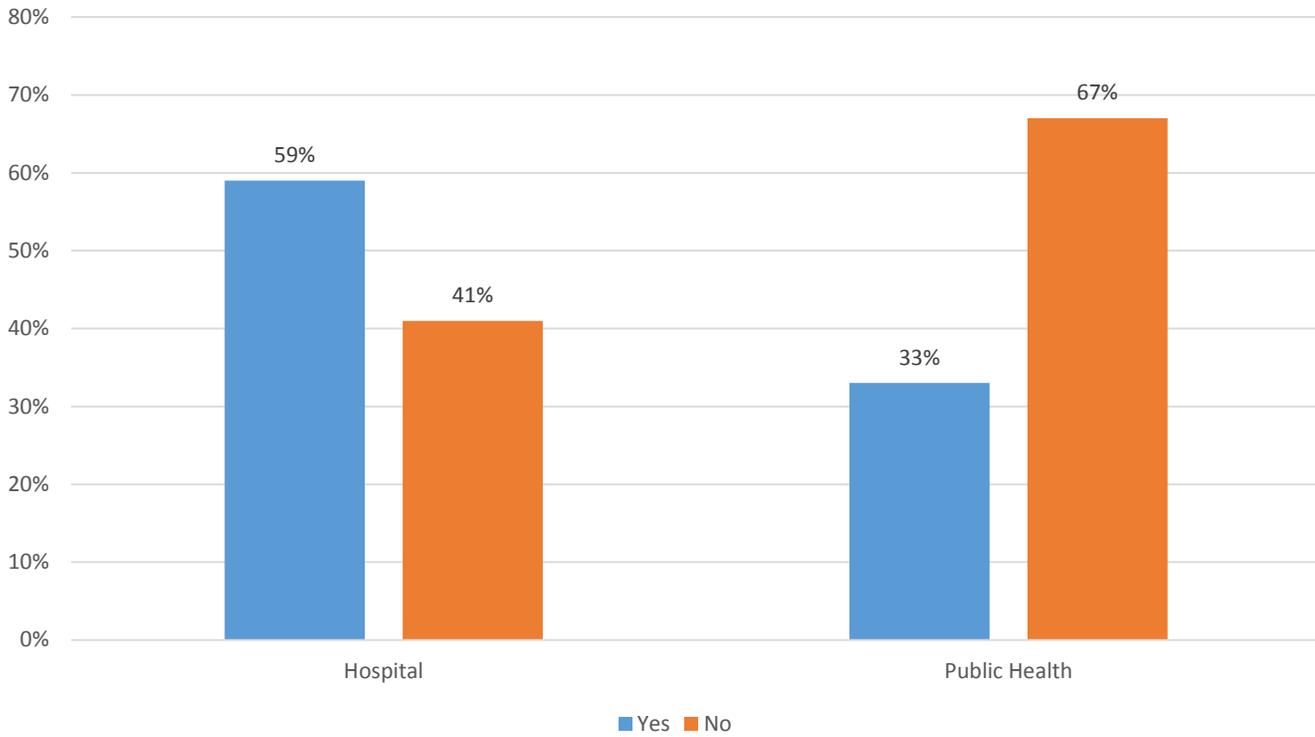

**Hospital:**

Answer Choices	Responses	
Yes	58.97%	23
No	41.03%	16
<b>Total</b>		<b>39</b>

**Public Health DONs & CNOs:**

Answer Choices	Responses	
Yes	33.33%	11
No	66.67%	22
<b>Total</b>		<b>33</b>

### Formal Policy/Procedure to Screen for SDOH

#### Q5: Which of the SDH are required screening

**Hospital:** Which of the five basic Social Determinants of Health does your institution have a policy/procedure requiring that the nurses to screen clients for? Please select all that apply.

**PHN:** Which of the following basic Social Determinants of Health does your institution have a policy/procedure requiring nurses to screen clients for? Please select all that apply.

#### Hospital:

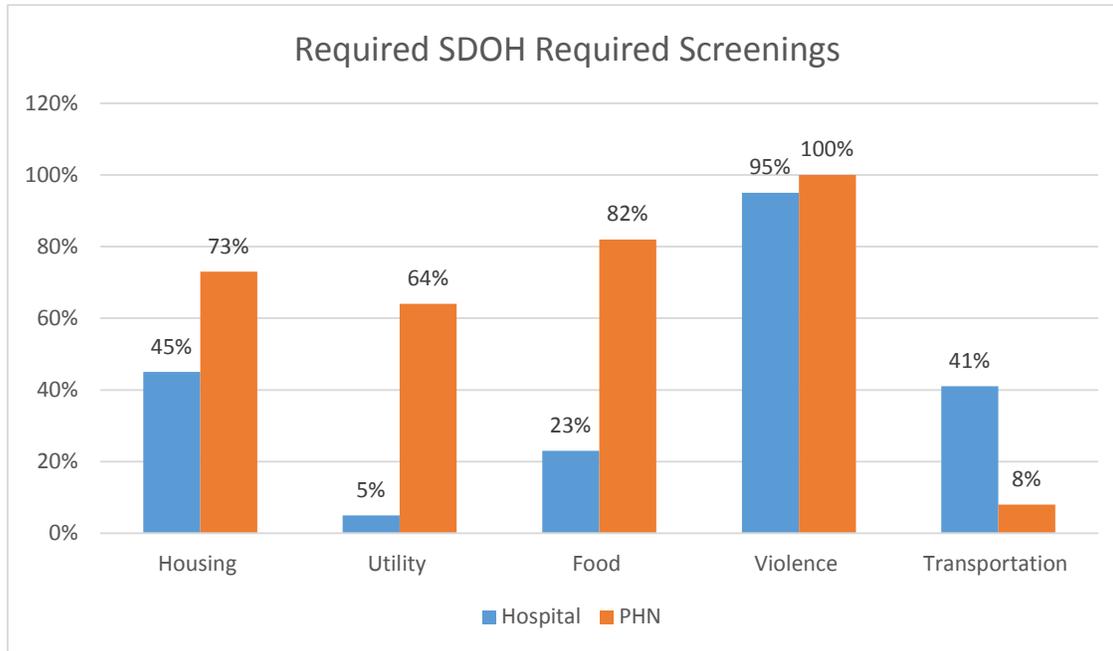

Answer Choices	Responses
Housing Instability	45.45% 10
Utility Needs	4.55% 1
Food Insecurity	22.73% 5
Interpersonal Violence	95.45% 21
Transportation Barrier	40.91% 9
<b>Total Respondents: 22</b>	

Skipped: 17

**Public Health DONs & CNOs:**

Answer Choices	Responses
Housing Instability	72.73% 8
Utility Needs	63.64% 7
Food Insecurity	81.82% 9
Interpersonal Violence	100.00% 11
Transportation Barrier	72.73% 8
<b>Total Respondents: 11</b>	

Skipped: 22

## Q6: CMS additional SDH required screening

**Hospital:** CMS also suggests that the following additional Social Determinants of Health likewise impact the health of individuals in our communities. Please indicate if there is a policy/procedure at your institution for the nurses to screen clients for any of the following additional Social Determinants of Health. Please select all that apply.

**PHN:** CMS also suggests that the following additional Social Determinants of Health likewise impact the health of individuals in our communities. Please indicate if there is a policy/procedure at your institution for the nurses to screen clients for any of the following. Please select all that apply.

### Hospital:

Answer Choices	Responses
Family & Social Support	91.43% 32

### Training Upon Initial Hire

#### \*Q11 PHN & Q12 Hospital:

If your nurses do receive training on the SDH at time of hire, please describe the training process:

##### Themes:

- SDH training during orientation reported for multiple institutions
- Specific formal training/orientation reported:
  - Online program thinkculturalhealth.org, titled Culturally Competent Nursing Care
  - BCMH training
  - Webinars in cultural diversity
  - Abuse identification risk factors, education readiness
  - Meditech training, review of social services
  - Computer based training
  - Food insecurity screening process taught via lecture and health stream (hospital)
- Two areas “discussed” during orientation

##### PHN:

1. supervisor and peer mentoring
2. Orientation includes discussing case management of clients; how to manage people who present or call the health department requesting assistance; people are then referred to social service agencies that offer services - there is not a written policy in regards to SDH
3. Completion of an online program on thinkculturalhealth.org titled Culturally Competent Nursing Care which does discuss the SDH
4. BCMH training
5. Orientation includes webinars in cultural diversity, review of nursing policies and procedures.
6. Training for resources available in our county and what referrals would be necessary based on needs.

**Hospital:**

1. Training on abuse identification risk factors, training on assessing education readiness to learn only.
2. Social Work and Case Mgmt discuss with during first week of employment; Individual preceptors discuss as part of orientation to the unit/clinic/site
3. Meditech training, review of social services
4. It is part of the orientation to our Documentation Policy and electronic health record.
5. COMPLETED DURING ORIENTATION WITH PRECEPTORS
6. During orientation for the new hire nurse, they are educated in regards to these components as part of the process when assessing new admission patients.
7. Computer Based training
8. **I wouldn't say they use that language at all. It is more education around driving forces for Risk Factors of Health or readmission.**
9. Through initial competency assessment
10. part of orientation to their department.
11. Food insecurity screening process taught via lecture and health stream
12. It is included in the EMR documentation training

**\*Q12 PHN & Q13 Hospital: Annual training**

Does your institution provide annual training or competency assessments for nurses assessing for Social Determinants of Health?

**PHN:**

Answer Choices	Responses	
Yes	10.00%	3
No	86.67%	26
Unsure	3.33%	1
<b>Total</b>		<b>30</b>

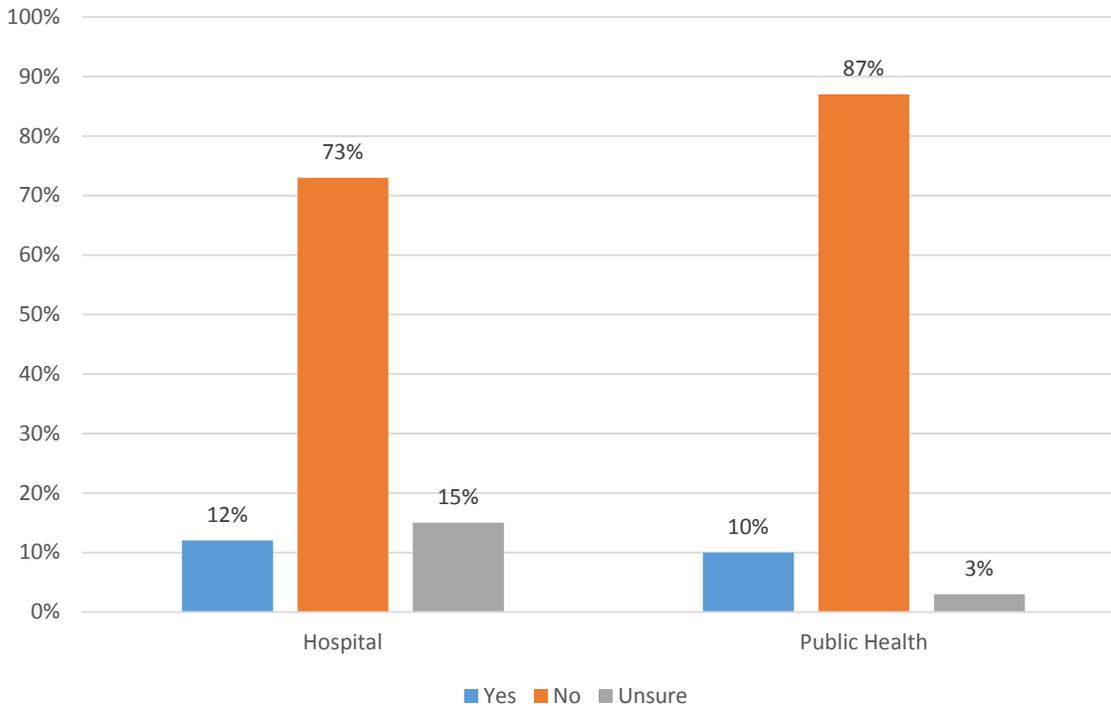

Skipped: 3

**Hospital:**

Answer Choices	Responses	
Yes	12.12%	4
No	72.73%	24
Unsure	15.15%	5
If yes, please describe the training process:	0.00%	0
<b>Total</b>		<b>33</b>

Skipped: 6

### Annual Training

#### \*Q13 PHN & Q14 Hospital: Annual training

*If your institution does provide annual training or competency assessments for nurses assessing the SDH, please describe the training process:*

- PHN:**
1. *contract with Litmos for this training.*
  2. *Training in SDH is part of our agency's overall staff development process but is not specifically focused on nurses. Our nurses working with families typically include assessment of SDH but we do not have a specific policy/procedure for doing so as an agency. The assessment is included in case files and/or program data base but **only our immunization and Title X clinic uses an EHR** -- the **Title X clients are routinely screened for SDH issues** but this is not routinely done for clients attending our immunization clinic.*
  3. *It is a component of our Annual Education and incorporated in the Help Me Grow training. It is usually provided via webinar or DVD training*

- Hospital:**
1. *Competency of abuse screening and assessment in teaching/learning*
  2. **online** *required annual education*
  3. *Mandatory **computer** based learning*
  4. **Computerized** *training*

**\*Q14 PHN & Q15 Hospital: Other SDH screened for**

Please list any other Social Determinants of Health that your health department screens clients for on a regular basis that are not otherwise listed in this survey:

- PHN:**
1. We do not have a formal screening in place for our health center patients but, **the attached file is a suggested format** which can be added to some EMRs
  2. Religious beliefs that may affect health care decisions
  3. **Safe Sleep**
  4. Blood lead screening
  5. see text box for #11
  6. Most of what we screen clients for is based upon what certain grants may require, but do fall into the social determinants category. During our STD clinic we ask about **safety, smoking** and any other health concerns that we may be able to give referrals for.
  7. **transportation, health insurance, access to healthcare providers**

- Hospital:**
1. **domestic violence**
  2. **psychosocial issues**
  3. **insurance coverage, transportation**
  4. **Suicide risk**
  5. **Depression** screening
  6. **illicit drug use and desire to remain clean**
  7. **Mental Health needs, health care literacy,**
  8. Human Trafficking
  9. Nutrition Screening, behavioral Screening, **social screening, physical functional assessments, readmission risk factors, suicide risk factors, smoking cessation, drug and alcohol use screening**
  10. Home Living environment/**safety/dme**
  11. **infant mortality, unintentional injury**
  12. **Suicide risk**

**\*Q15 PHN & Q16 Hospital: SDH assessment tool**

Please share your organization’s Social Determinants of Health Assessment Tool(s). Upload one here:

**\*Q16 PHN & Q17 Hospital: Additional SDH**

<b>PHN:</b> Upload additional SDH assessment tool here:	<b>Hospital:</b> SDH Assessment Tool #2 - Upload here:
---------------------------------------------------------	--------------------------------------------------------

**\*Q17 PHN & Q18 Hospital: Assessment of SDH educational material**

<b>PHN:</b> Please share the learning modules or educational material used by your agency's nurses in assessing for the Social Determinants of Health. Upload one here:	<b>Hospital:</b> Please share the learning modules or online educational tools that your agency’s nurses use to assess the Social Determinants of Health. Upload here:
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**\*Q18 PHN & Q19 Hospital: Additional SDH educational material**

<b>PHN:</b> Upload additional learning modules or educational material used by your agency's nurses in assessing for the SDH here:	<b>Hospital:</b> Additional learning module/online educational tool for assessing SDH - Upload here:
------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------

**\*Q19 PHN & Q20 Hospital: Any other comments that you would like to share?**

- PHN:**
1. The social determinants of health are main questions asked on our community health assessment.
  2. Unable to upload to this survey
  3. We have not fully addressed these SDH in an annual training. We do cover Civil Rights Training and the provision of services in culturally and linguistically appropriate ways. We do assess people for income & insurance status as well as transportation issues. Housing, potential intimate partner violence and food accessibility are asked more

frequently in some programs. We do not have a formal policy about asking about each SDH or a screening tool at this time, but see that this should be implemented more formally. **(Fulton County Health Department)**

4. This is the first I have seen CMS requirements for assessing social determinants of health so I thank you and will work toward establishing policies and procedures at my local health department!

**Hospital:**

1. I do not think we can say we are doing a comprehensive assessment of social determinants of health. We do upon initial nursing assessment ask about family and social support, we do ask smoking and drug history. We do screen for violence. But we do not ask about education level, whether or not someone has a job or a steady source of income. In the context that the questions are framed: an assessment for social determinants of health, we are more "no" than yes.
2. Many of the assessments are done by Social Workers or Discharge Planners, not the nurses, based on risk. Other questions such as employment status, etc. are asked at Registration not by Nursing personnel. Nurses screen for violence and smoking for example, but do not get into the other basic SDH areas.
3. Cannot access any other tools at this time.
4. The nurses in the outpatient clinics have what are called "clinical reminders". These reminders are actually screening tools for some of the social determents mentioned. Unfortunately I cannot up load the reminders as I do not have them in word or PDF formatting. We also rely heavily on social workers here at the VA and they have their own tools as well. **(Louis Stokes VAMC)**
5. We have an EHR and I am unable to load for sharing purposes.
6. We implemented a Health Coach Program which is under the Alliance Community Care Network (ACCN). Patients are screened using a SEMAPS Tool. If patients are appropriate to work with a "coach" a "health coach" is assigned to the patient after the initial visit(s) and medication reconciliation is completed by the ACCN Team. Social Determinants are addressed by the "team" which consists of a Physician, Nurse, Nursing Director, Dietitian, Pharmacist, Chaplain, Social Worker and the Health Coach. All Social Determinants listed are addressed as well as mental health and health care literacy. **(Alliance Community Hospital)**
7. Nursing / Case Management / Social Service work collaboratively to address patient needs identified upon admission and through daily discharge planning.

<ol style="list-style-type: none"> <li>1. I assessed my faculty regarding these topics – it appears the social determinants of health are integrated throughout the ADN curriculum. There is heavy emphasis in the 4th semester (of a 5-semester program). At this time, I do not believe we have a specific tool although facets are integrated into the fundamentals assessment document.</li> <li>2. No tools!</li> <li>3. ALL levels of nursing should be represented here. Our program incorporates all but the income SDH concept. I wish that LPNs and their pre-licensure programs were part of the conversation. We have something to offer that I feel is being overlooked.</li> <li>4. N/A</li> </ol>

This survey was conducted through the work of multiple individual partners from hospitals, health departments and nursing colleges across Ohio; the *Ohio Action Coalition*, the *Robert Wood Johnson Foundation* and *AARP, Inc.*
