

*Sameer Sood aims to rethink healthcare across education, technology, delivery, and power. He teaches digital health at multiple medical schools and has worked with and advised numerous innovative health tech, device, and community startups of all stages since 2011. In 2015, he was a fellow at Harvard Medical School's Incite Health program, where he trained in design thinking and co-founded his first startup Sherbit Health, a remote-patient monitoring company designed to inform and engage patients and providers in understanding how lifestyle, behaviors, and socioeconomic status impact health, where he was Chief Innovation Officer until their acquisition to Huma in 2018. Since completing his Family Medicine residency at Duke University, Sameer has practiced with marginalized populations across the country in tribal and special needs clinics while working to transform systems with technology, payment innovation, and community organizations to address community wealth, power, and upstream social drivers of poor health. He is CEO and Co-Founder of FwdSlash, a Social Determinants of Health Innovation company aimed at evolving Medicaid to work with communities to eliminate social disparities. On the side, he consults with health tech and AI companies and is a board member of the American Osteopathic Information Association where he helps to create innovative programming and an ecosystem for health tech companies to work with the osteopathic community.*
