

Napoleon Monroe's diversified background runs the gamut from developing and producing emergency pharmaceutical delivery systems to managing a Fortune 500 private brand, and building and managing the IP portfolio for a company that is now part of Pfizer.

His areas of expertise include product development, licensing, regulatory processes, risk management and international marketing, with experience managing business relationships in more than 30 countries.

As vice president of corporate brand development for global healthcare distribution and service company Henry Schein, Inc., where he held various positions from 1996 through 2008, Mr. Monroe was responsible for all aspects of the company's private brands (annual sales were greater than \$500 million). While there, he began filing medication management patents.

Before Henry Schein, Mr. Monroe spent more than 20 years at Survival Technology (now a part of Pfizer), where, as a corporate vice president, he was responsible for product development and systems strategy. While at Survival, he invented three medical devices that were patented and commercialized; two were for autoinjectors and one was for a transtelephonic, peak-flow monitoring device.

There, he also led teams that invented, prototyped, tested, commercialized and scaled up such other products as: the EpiPen, the leading product for treatment of anaphylactic shock; the Antidote Treatment Nerve Agent Auto-Injector delivery system, which still protects U.S. and allied military and civilian personnel; and products that supported the formation of Shahal Medical Services in Israel and Raytel (now part of Philips in the U.S.).
