

Q1 The following 120 plants may be considered for regulation by the Pennsylvania Controlled Plant and Noxious Weed Committee. PLNA has a seat on this committee. Regulation could range from a requirement to obtain a permit from the Pa. Department of Agriculture to propagate or grow the plant to an outright ban on propagation, sale or transport. We need your help in identifying species on this list that are important to the landscape, nursery and garden center trade in Pennsylvania. Please rate the following plants according to your perception of their economic value to the landscape, nursery and garden center industry as a whole in Pennsylvania. Please rate each species as having "No Value," "Some Value" or "High Value." If you are unfamiliar with a species, please select "No Value." Please take into account the entire industry and not just your own business in your answers. Completing this survey should take about ten minutes. Your input will be very helpful to PLNA's participation on this committee and our ability to represent the industry's economic and environmental interests.
