The applicable building energy code that determines the minimum insulation requirements for commercial roofs with insulation entirely above the deck in New York is the 2020 Energy Conservation Construction Code of New York State (based on the 2018 International Energy Conservation Code with state-specific amendments). This code is effective May 12, 2020. The minimum insulation requirements apply both to new construction and roof replacements on existing buildings.

Note that local jurisdictions may adopt the NYStretch Energy Code-2020, which requires increased levels of insulation for commercial roofs. Please consult your local jurisdiction to determine whether this code is applicable.

Notes

- **About R-value**: R-value is a measurement of a material's ability to resist heat flow. The higher the R-value, the greater the insulating power. Installers should consult data sheets provided by polyiso manufacturers for information on product-specific R-values.

- **Code Compliance**: The International Energy Conservation Code recognizes ASHRAE 90.1 as an alternate compliance option for both new construction and existing buildings.

About PIMA

Since 1987, PIMA has served as the voice of the North American rigid polyiso insulation industry. PIMA is a leading advocate for safe, cost-effective, sustainable, and energy-efficient construction. The Association is comprised of polyiso manufacturers and industry suppliers, and represents the public policy interests of its membership at the local, national, and international levels to advance high-performance building practices.

About Polyiso Insulation

Polyiso is a rigid foam insulation used in more than 70% of commercial roof construction and offers a continuous insulation solution for commercial and residential wall assemblies. As one of North America’s most widely used and readily available building products, polyiso is a cost-effective insulation option for reducing building energy use and improving the overall service-life of roofs and walls.
