

## **PPFA Policy on Sustainable Building**

The Plastic Pipe and Fittings Association (PPFA) strongly supports sustainable building. Standards and rating systems for sustainable and green building should be developed using an ANSI accredited process. Such standards and rating systems should utilize Life Cycle Assessment (LCA) to establish criteria that cover the broad range of construction materials and techniques.

PPFA Sustainable Building Mission Statement: To promote the benefits of the sustainability and superior performance of plastic piping systems in the built environment.
