Restaurant Refresh: New Money Saving Program from SoCalGas

If you've been considering equipment upgrades, a new SoCalGas® program called Restaurant Refresh can help make the business case. SoCalGas is offering eligible restaurants a no-cost energy assessment that can help you save in 3 ways: reduced utility bills, enhanced equipment rebates, and cash pay-outs based on one-year gas savings.

It starts with a no-cost, no obligation energy and water assessment of your restaurant. This provides recommendations on how to be more efficient, along with estimated dollar savings, available incentives, and payback periods. Then if you decide to upgrade 3 pieces of qualifying equipment – from hot water pipe insulation to lighting to a new appliance – you get access to the enhanced financial incentives. With these incentives, paybacks are generally reduced to 2 years or less. Though the focus of this program is on gas, it covers electricity and water as well.

Terms, conditions and eligibility requirements will apply, but staff will help make the process as smooth as possible. Get started today by contacting Frontier Energy – the contractors hired by SoCalGas to implement the program – to learn whether Restaurant Refresh is a good fit for your business. You can also join us for a webinar explaining the program on **Tuesday 4/24 at 10 am**.
