Core SIPP – Empowering States to Save Lives
Administered by the Centers for Disease Control and Prevention (CDC) National Center for Injury Prevention and Control (NCIPC), the Core State Injury Prevention Program (Core SIPP) is a unique program that helps states implement, evaluate, and disseminate strategies that address the most pressing injury and violence prevention issues. The program is intended to provide funds to support states’ “core” or baseline capacity.

Congressional Asks

Expand Core SIPP from 23 to all 50 U.S. states and territories by increasing support from $6.7 million to $50 million by 2030 (an increase of $5 million each year from FY 2022 to FY 2030).

Establish a dedicated Core SVIPP line-item in the budget to support critical public health actions and provide states the flexibility needed to address their own injury and violence prevention needs.

Base funding levels have been capped at $250,000 per state for more than a decade. Core SIPP requires funded states to address three topic areas that were prioritized by the NCIPC in 2021, which include adverse childhood experiences (ACEs), traumatic brain injury (TBI), and transportation-related injury.

A national IVP program is an urgent public health need. Core SIPP and is the best foundation for building a true national injury and violence prevention program in every state and territory.
