Appointment** with > 15
years experience with
specialist interest

3b = **Senior
Management** with >
15 years experience

Overview

Many organisations have made their emergency planning a low priority in their business plan. This is a common blunder in industry today. There may be a plan in place. However, lack of drive and commitment as well as personnel changes resulting in the inability to update evacuation plans may be evident.

The workshop is designed to provide a broad generic guideline of emergency planning for evacuation for multi-size organisations. Also it will provide back-up ideas for crises management and business continuity management teams. Group discussions and scenarios will be included. Furthermore, it will assist senior management to make certain decisions and actions, which may be instrumental in any emergency or crises situation.

Contents

- Introduction
- What is an Emergency?
- What are the hazards associated with emergencies?
- Critical issues
- Emergency plan guidelines
- Planning for an emergency
