Keynote Speaker

Shane's Inspirations: A Coalition for Care that Changes Lives – **By: Scott Williams**

Mr. Williams will be delivering a lecture titled “Shane’s Inspirations – A Coalition for Care That Changes Lives”. “Shane’s Inspiration” creates accessible and inclusive playgrounds for children with disabilities to play along with typically abled children. These free, outdoor inclusive play environments are age appropriate and include safe, state-of-the-art sensory-rich structures that encourage healing in children with developmental disabilities. “Shane’s Inspiration” has opened 68 playgrounds in the United States, Canada, Mexico, Ecuador, Israel and Russia with over 55 more in development.

Steve Gordon Memorial Lecture

Update on Standards for Development of Geriatric Programs –

By: **Leo Marchini and Ron Ettinger**

During the past year, SCDA has worked diligently to respond to the ADA's request to consider pursuing establishing an accreditation process for geriatric dentistry education programs. The SCDA Board charged the Council on Geriatric Dentistry to form an ad hoc committee to study the ADA's Council on Dental Education and Licensure (CDEL) report and present its recommendations to the SCDA Board. This session will present the outcomes of the Ad Hoc Committee's deliberations and recommendations.

Max Bramer Lecture

Our Journey to Humanize Care for People with Special Needs –

By: **Lauren Clark, RN, PhD**

At this unique historical moment, we are at the intersection of disability studies and professional dental care. We are traveling through a historical alliance that is rapidly evolving. In this talk, we will review that journey through disability history, and then explore paths to humanizing dental care by attending to the art and craft of dentistry.

Updates on Head & Neck Cancer Treatments, along with Advances in Radiation Oncology, Medical Oncology and Dentistry –

By: Wanxing Chai-Ho, MD; Robert Chin, MD; Evelyn Chung, DDS & Travis Shiba, MD

There have been many advances in the management of the head and neck cancer (HNC) patients. The advances in surgery, chemotherapy, and radiation therapies modify how oral health care providers interpret the care needed for this population. We will introduce some of the advances in the different therapies and how the dental service can augment this process. We will present some updates which will help oral healthcare providers with the management of the head and neck oncology patient. This discussion will be followed by updates from medical oncology including traditional chemotherapy, advances in Immunotherapy, and targeted therapy. Updates on radiation modalities and techniques will include dosing strategies and the treatment planning process. The role of the dentist in the pre-radiation process and post-radiation management will be discussed. The talk will also present how patients benefit from a multidisciplinary approach throughout this entire process.

Students

Part 1: Student Chapter Collaboration and Advancement Seminar –

By: Carleen “Carly” Tse & Ciara Schwarz

This presentation will cover important aspects of organizing SCDA nationally recognized chapters within schools of dentistry. Specific topics will include how to start a chapter, ways to adapt to the new COVID-19 reality, and a variety of Lunch and Learn ideas. We will also set aside time to highlight strategies that have made your chapters strong. This will be followed by a lively question and answer session.

Part 2: Grand Rounds and Evidence Based Dentistry 2020 –

By: Dr. Maria Hinojosa, Dr. Vinaya Kundapur, and Ms. Kerry O’Bannon

Based on the overwhelming success of previous years' grand rounds presentations, the program is back with new cases and new clinical questions! Residents and students from across the country have been invited to present a clinical case, develop a clinical question, and use existing literature to answer that question. A brief overview of evidence based dentistry will also be provided to help set the scene for the work the residents and students have completed.

Live Webinars

Updates on Cardiac Devices, Treatments, along with Advances in Assist Devices – **By: Ali Nsair, Elan Moreno, Reeva Mincer**

There have been much updates and new techniques in the world of cardiology and CT surgery. Some of the updates includes therapies such as mitral clips, transcatheter aortic valve replacement (TAVR), Ventricular assist devices (VADs), and heart transplantation. The dental team plays an important role in clearances for these therapies. In this talk we will discuss some of the newest devices and therapies, the indications, and how the treatment are performed. In the advanced therapies such as mechanical circulatory support and transplantation, we will discuss the selection process that occurs and what the patient will go through. For those who receive specialized devices such as VADs, whether it is a destination device or bridge to transplant, there are precautions that the patient and health care provider must take, along with potential concerns and pitfalls. As well noted in literature, patients who undergo cardiac surgeries, any source of infection can significantly increase morbidity rate and cost of treatment. Any unidentified source and therefore non-treated infection, including those originated from dental or oral cavity, can compromise the outcome of the cardiac surgery procedures. Hence, it is crucial to eliminate any sources of infection in oral cavity including diseased teeth, prior to cardiac surgery. However, this is only possible through a thorough dental examination prior to any cardiac surgery. This comprehensive session will also review the literature along with the UCLA experience of this patient population including a review of difficulties faced in this patient population.

Can I Sedate 'Em? – **By: James Hunt**

In this presentation, we'll talk about common behavior components that will influence interaction of patients with intellectual disability and healthcare staff, we'll also identify common caution flags for potential sedation patients, and we'll discuss some strategies and tools used to improve care experiences for patients with intellectual disability at our institution. Time permitting, we can review some common pre-operative/sedation medications for those situations when sedation is needed.

Pre-Recorded Presentations

(On Demand)

Transition from Pediatric to Adult Based Dental Care – By: Sydnee Chavis, DMD

This lecture will explore how special needs patients can receive age-appropriate care and will review updates to the Transition protocol implemented at the University of Maryland School of Dentistry Pediatrics Dental Clinic. Attendees will also take part in evaluating the clinical protocols and methods recommended to transition patients from pediatric to adult-based care and the applicability and feasibility of applying them in practice for patients with special health care needs.

Dentistry is out of the Box and on the MOVE! – By: Sonya Dunbar, BSRDH

The dental profession must go into nursing homes to provide care. Dentists have had to set up clinics in schools to reach low income children and have gone as far to set up a makeshift clinic in the subway station in New York City for the homeless. Yes, dentistry is out of the box!

The Older Adult: The New Face of Addiction – By: Ann Spolarich, DDS, RDH, PhD, FSCDH

This course will examine the widespread problem of substance abuse and addiction among older adults. This lecture will identify substances that are commonly abused by elderly individuals, identify factors that contribute to drug dependency in older adults, and describe risks for cancer, infections and infectious disease associated with drug use among elderly patients.

SCD Talks: Ideas Worth Sharing – By: Mai-Ly Doung, DMD, MPH, MAEd

In the style of TEDTalks, this session invites you on a journey full of energy and wonder. With the purpose of spreading ideas in the form of short and powerful talks to engage people and spark conversation, five dental professionals in special care dentistry will each share a wise message, lesson, or story. The ideas and issues that will be discussed will help attendees better understand and frame their thoughts, words, and actions related to the current and future landscape of special care dentistry.

Geriatric Care Delivery Modality at Herman Ostrow School of Dentistry of USC – By: Lisa Hou, DDS

Attendees will learn how comprehensive dental treatment can be provided in a non-traditional setting such as a mobile dental van. Participants will also gain insight to a different modality of care delivery to geriatric patients who may not have access to traditional dental clinics and will learn about providing comprehensive health care to vulnerable geriatric patients in an inter-professional care setting.

Challenges and rewards: Lessons from our journey towards digital workflows in special care dentistry – By: Rohit Nair, BDS, MDS

This cutting edge-lecture will familiarize you with currently available technology for intraoral scanning, modeling, simulation and fabrication of removal dental prostheses. Participants will learn to use this information when selecting cases for digital workflow.

Behavior Management: Immobilization, Sedation or Anesthesia for Individuals with Disabilities – By: Russell Reddell, DDS

Behavior management is necessary to provide care for individuals with disabilities. Participants will learn about a newly developed screening process to determine if immobilization, sedation, or anesthesia is needed to provide the appropriate dental care necessary for individuals with disabilities.

Nuts and Bolts of Teledentistry – By: Jennifer Hartshorn, DDS

Teledentistry is an under-utilized method for providing dental services outside the clinic to vulnerable populations. This model of care is especially appropriate for dependent adults who face barriers when receiving traditional dental care. This session is designed to explore the potential for teledentistry programs aimed at dependent adults and patients with special needs.

Mouth Breathing in Children: Problem or Not? – By: John Jones, MD, DMD

Mouth breathing can have profound detriments to growth and development. This presentation will explore the causes and consequences of mouth breathing and will also provide information on procedures to help practitioners screen for this issue in children.

These are only some of the exciting SCDA presentations we have scheduled, with many more to come!

Look for additional updates coming soon!

ABOUT EVENT

The Special Care Dentistry Association's Virtual Annual Meeting's program provides richness in content and value, which has been a tradition of the SCDA Annual Meetings. It promises to fulfill our mission of disseminating valuable and timely education for our members and individuals seeking to enhance the lives and well-being of our special care dental patients.

This event promises to deliver nationally recognized keynote speakers, live lectures and many pre-recorded presentations that you will be able to view at your leisure.

By attending the live virtual presentations and events, you will also have the opportunity to earn ample continuing education credits based on your participation.

This meeting will provide up to 21+ CME credits.
