

The SETAC Europe Council Declaration on Research Integrity

We recognize the need for research integrity to guarantee that high quality research is available to be used as the basis for science-based environmental decision making.

We therefore agree that research from all sectors (both academic, governmental, and private) should be founded on the principles listed in the "European Code of Conduct for Research Integrity" as published by All European Academies (ALLEA, 2017).

We stimulate all SETAC staff, SETAC Europe members, SETAC Europe meeting participants, SETAC Europe partners and SETAC Europe sponsors, and in fact the entire community of environmental professionals, to follow these principles in all aspects of research (including funding, data generation, interpretation, reporting, dissemination, and usage for policy-making).

We commit, with the support of SETAC staff and volunteers from the entire SETAC Europe membership, to fostering a culture of research integrity and to develop and implement a research integrity plan across all SETAC Europe activities (including professional training and education).
