

The Impact of the Doctor of Nursing Practice on the Health Care of Texans

This quantitative descriptive study will explore the impact of the Doctor of Nursing Practice (DNP) on the healthcare of Texans. Specifically, this study will focus on the impact occurring when individuals in a leadership role within the agency have a DNP.

Participants will be asked to answer demographic questions, multiple choice, and open-ended questions about their experiences as a DNP graduate in an administrative/ leadership role.

We are offering \$50 gift cards to two of the participants who fully complete this survey. Two participants will be blindly chosen from Qualtrics

The study has been classified by the Texas Tech University Health Sciences Center Institutional Review Board (IRB#L20-084) as an exempt study (1/28/2020).

We need your help to identify DNP graduates working in Texas who could complete the survey to help us get at this important information. Any individual who is currently working in Texas who complete a DNP degree program is welcomed and encourage to access and complete the survey link provided. Please help us to obtain an effective group of individuals to complete this survey and provide us with critical information as we strive to validate the DNP impact on healthcare in Texas.
