Clair Davis, PE, CFM

Position: Region 4 Director

Describe your qualifications, past TFMA involvement, etc.:

I have been a Certified Floodplain Manager since 1998, and Floodplain Administrator for the City of Fort Worth since 2002. I am a graduate of Tarleton State University’s Hydrology and Water Resources program, and a licensed Civil Engineer with water resources emphasis. As the current Region 4 Director, I have gained invaluable experience working with the other regional directors and TFMA officers since 2017, and I look forward to continuing to represent the members of 18 counties that make up Region 4.

Summarize why you think you would be the best candidate for this role.

Working with the other regional directors and TFMA officers, training and outreach are now two of the primary goals and objectives of the Association. In my first term as the director for TFMA’s Region 4, one of my goals was to increase training opportunities for CFM’s in the 15 more rural counties in Region 4 outside the DFW Metroplex area. If re-elected, I will bring additional web-based training opportunities to rural counties through TFMA, FEMA, and the Texas Water Development Board. I will look for opportunities to coordinate CFM exams and other in-person training courses outside of the Metroplex area. I will also continue to work with the Region 10 director to coordinate the annual Region 4/10 Luncheon.

With over 20 years as an active CFM, I’ve seen a lot of unusual projects from rural to urban areas. I have mentored numerous other CFM’s across the state. As a regional director, one of my most important duties is to be a resource for any CFM who has a difficult floodplain permitting, management, or educational situation. If re-elected, I look forward to continuing to serve the TFMA membership!
