

TCA's New Mobile Gateway
Making Shortcuts on Your Home Screen

m.traincollectors.org

Add TCA's Gateway Website Mobile Version to Your Smartphone Home Page

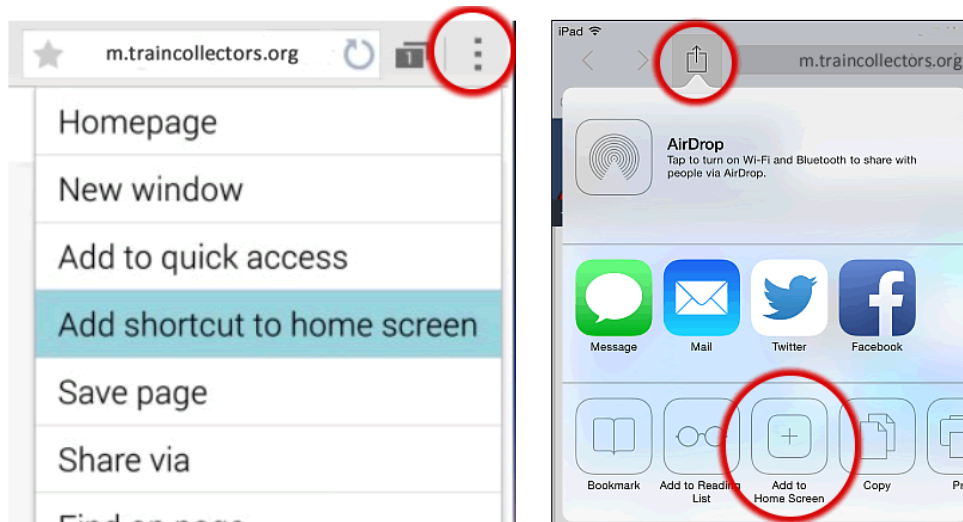

TCA's mobile gateway site provides condensed information about TCA for visitors, with links to special summary pages as well as to our main sites that provide more extensive information that are best viewed on larger screens. It also provides some handy buttons so you can send an email to designated TCA offices:

For easy access to TCA's websites while on the go, you can add a shortcut icon to TCA's mobile gateway to your device's home screen, as seen on top of previous page, on the right.

It may work slightly different on different phones or devices and depending on what browser you're using, but essentially, you do this:

1. Open your phone's browser and navigate to m.traincollectors.org. The "m" is important, because it takes you to the specially crafted version of our gateway site that works especially well on smartphones or even on small tablets like iPads.
2. With the site open, look for either three dots or the word "More," usually at the top right of your screen. Click on it, and on the dropdown, select the "Add shortcut to home screen" or similar wording. For an Apple device, look for the square symbol with an upward arrow, click on that and select "Add to Home Screen."

Then, when you want to get to the site without having to open your browser first, just click on the resulting icon on your home screen (may look different depending on device):

You can also simply open your mobile browser to the site and make a bookmark within it, but the home screen icon makes it easier. Note: computers vary. For further advice, contact your computer support person; TCA cannot provide individual computer advice.
