Looks like it’s that time of year again to “get your geek on”. And the Information Technology and Security Seminar would be a perfect place to do just that. But to be fair, it is so much more than just computers. Water Meter Technology has been advancing so fast in the last 5 plus years it can be hard to keep up. Let us show you the 123’s of Fixed Network Systems. It seems to be the system of choice for the foreseeable future. Video inspection will also be discussed as technology allows us to use more and more video to accomplish our jobs. But we certainly do not want to leave our computer geeks out in the cold, so we will have a talk on Cyber security which should be paramount on everyone’s list. GIS is a fundamental staple of so many utilities and companies it is hard to imagine our jobs without it. That’s why we will have a large company discussing how they utilize this important tool to its fullest potential along with using GIS online, which can bring a whole new set of features to your toolbox. And we will finish the day with an overview of some new IT Tools you may consider using. It may open you up to a new way of working.

If you have never been to an IT & Security Seminar in the past why not make this the year. We will keep a spot open just for you!
