Stretch Break

Stretch Break Tips:
- Check your workstation to be ergonomically safe to prevent unnecessary aches from neck, shoulders, back and hips
- Set your phone timer for your stretch breaks, every hour stretch break
- Have a water bottle at your workstation, drink ½ your body weight in ounces daily
- Stand up whenever you can, to take phone calls or listen to webinars
- Practice relaxation breathing throughout the day
- Schedule a Daily 30-minute walk daily

Move #1: Walking
- Warm up- walk around your house or march in place for 1 minute

Move #2: Shoulder Rolls Sitting or Standing
- Roll your shoulders forward for count of 5 then roll back for 5

Move #3: Head Leans Sitting or Standing
- Lean head forward, then lean right ear to right shoulder, then forward, hold and then lean left ear to left shoulder, twice to each side

Move #4: Shoulder Squeeze/Goal Post Arms Sitting or Standing
- Squeeze shoulder blades together, breathe, hold for 10 seconds, relax

Move #5: Shoulder and Back Sitting
- Sit forward on your chair, reach back with your hands and hold onto chair and rest your head forward while leaning forward to open up chest and shoulders, hold for 10 seconds
Stretch Break

Move #6: Lower back Sitting Position

- Hold onto shoulders with opposite hands, position feet out to the side, slowly lean forward while exhaling and then inhale while coming back up

Move #7: Hips Sitting Position

- Bring right knee to chest hold with hands under thigh, then switch legs
- Sitting forward in your chair, cross your right ankle onto your left knee, lean forward and gently press down on your right knee, left ankle to right knee

Move #8: Hands Sitting or Standing

- Hands circles, both directions, flex and extend wrist, forward and back, spread fingers out wide, press fingers of each hand against each other

Move #9: Ankles Sitting or Standing

- Ankle circles, one direction and then other, tap ball then heel

Move #10:

- Relaxation Breathing-Sit upright in your chair, back supported, feet flat on the ground, breathe in through the nose and out through your mouth for 1 minute, close your eyes if you wish!

Super Job! You deserve to take time for yourself and move!
OFFICE ERGONOMICS REMINDER SHEET

GOAL: To help you remember how to set up your workstation to allow you to work in an ideal manner.

Things to remember:

- Your thighs should be 90 degrees horizontal to, and lower legs 90 degrees vertical to, the floor.
- Your chair seat height should be level with the back of your knee when your feet are on the floor. You should measure from your footrest instead of the floor if using a footrest.
- Your upper arms should hang 90 degrees vertical to, with forearms 90 degrees horizontal to, the floor. Your elbows should also be close to your body.
- You should keep your wrists straight or in a neutral position, and not anchor or rest them on anything.
- Your back should be upright (or slightly reclined), and not twisted.
- Your feet should be 90 degrees horizontal to lower legs.
- Your line of sight should be between horizontal (straight ahead) and 35 degrees below horizontal.

Remember, your body is meant to move. You can do this even when you are sitting. You can adjust your station throughout the day to allow for subtle changes in the angles at the ankles, knees, hips, wrists, elbows, shoulders and neck. This can also be accomplished through leaning back in the chair and stretching the legs out. Implementation of a stretching program also provides this change in movement.

Use this picture to remind you of “The Goal.” Can you get your workstation to look like this? Print the full-size graphic on page five to hang in your workspace to remind you how to set up your surroundings in an ideal manner.
Here are some detailed points to help you evaluate your workstation layout.

**Chair**
- Your chair should be adjustable in seat pan height and angle, backrest height, angle, and have adjustable armrests.
- It should be adjusted to meet your body and task requirements.

**Keyboard**
- Your keyboard should be located at an appropriate height and angle to maintain neutral up right posture, with your arms relaxed at your sides, with 90 deg angles at the elbows and straight wrists.
- Do not anchor your wrists on the wrist rest. Remember, the “wrist rest” should be used only when resting and not when keying!

**Mouse**
- Position your mouse about the same level as your elbow so that you can access it with a straight wrist.
- If using the mouse for long periods, your forearm or elbow should be supported.
- If using a keyboard tray, it should be wide enough to place the mouse on. The mouse and keyboard should be at the same height.
- Rest fingers on the mouse buttons rather than holding them in the air and do not hold the mouse too tightly.
- The mouse should be placed directly in front of your operating hand.

**Monitor**
- The height of the monitor should be positioned so that when you are sitting upright, looking forward you can read the entire screen without any excessive neck movements.
- The monitor tilt should be adjusted to minimize glare.
- If you wear bifocals or trifocals, you should place the monitor 5-10 cm below your line of sight to allow you to view the screen through the bottom half of your glasses while maintaining a neutral neck posture.

**Documents**
- If your primary task is data entry then your documents should be located directly in front of you. A document holder can help decrease neck and eye strain.

**Telephone**
- If you use the telephone frequently, it should be placed close to you. You should locate it close to the hand that will pick up the receiver.
- If you need to use the telephone and computer at the same time then a headset or hands free mode should be used.
- Do not cradle the telephone between your shoulder and ear when required to use both hands on another task.

**Reach Zones**
- All items should be placed within a comfortable reach.

**Printers and Scanners**
- If used frequently it would be ideal to have it close by.
- If used infrequently getting up to go to a printer provides a good change of posture.

STRETCHES TO PREVENT ERGONOMIC PROBLEMS

GOAL: To help you stretch and move in a way that will ease tension caused by working at a computer for long hours, helping you avoid developing ergonomic issues.

Neck Stretches

Pull head to right side.   Pull head forward.    Pull head to left side.

Shoulder Stretches

Shoulders up.   Shoulders forward.  Shoulders back.   Arms up!

Stretch arms up and forward.          Stretch arms up and back.

Arm Stretches

Stretch opposite arm.    Stretch arm behind you.    Stretch elbow in and back.
STRETCHES TO PREVENT ERGONOMIC PROBLEMS

Wrist Stretches

Bend wrist back with elbow straight.

Stretch wrist back—gently.

Bend down, elbow straight.

Stretch wrist down.

Open hand and stretch.

Hand Stretches

Straighten out thumb.

Bend wrist across palm.

Make a fist.

Straighten fingers.

Pull fingers together.

Spread fingers apart.
